

### **Progress Report**

# Flow in Layered Unconventional Reservoirs

Ilkay Eker, Colorado School of Mines

**UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT** Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

### **Problem Statement**

# **Layered Unconventional Reservoirs**

Producing layers sandwiched between layers of very tight (source) rock

Horizontal wells Hydraulic fractures Multiple phases

. . .

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 2 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

### **Problem Statement**

# **Layered Unconventional Reservoirs**

### **Production from thin, fractured layers**

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 3 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

## **Problem Statement**

### Support from the source rock layers

Source rock may feed into the producing layer if it has fractures

Productive layers are usually adjacent to thermally mature, kerogen-rich shales.

In these cases, both the source and producing rocks have a high fracture density along with a large residual oil content

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 4 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

### **Perception of the Physical Model**

### Interaction between source and producing layers

Maturation and migration of hydrocarbons cause a highly permeable (fractured) layer on the surface of the source rock adjacent to the producing layer

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 5 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# **Perception of the Physical Model**

### Interaction between source and producing layers

Production from the producing layer causes flow and pressure drop in this boundary layer

Depletion of the boundary layer causes pressure and concentration gradients in the source layer and instigates diffusive and advective flows

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 6 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# **Perception of the Physical Model**

### Interaction between source and producing layers

Maturation and migration of hydrocarbons cause a highly permeable (fractured) layer on the surface of the source rock adjacent to the producing layer

Production from the producing layer causes flow and pressure drop in this boundary layer

Depletion of the boundary layer causes pressure and concentration gradients in the source layer and instigates diffusive and advective flows

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 7 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# **Modeling Approach**

### Alternating layers of source and producing rock Identical source layers & identical producing layers

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 8 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# **Modeling Approach**

Flow **Mechanisms**

#### Flow from Producing Layer to Fracture

Single Phase (Gas) Flow:

$$\frac{\partial \left(\phi c \rho\right)}{\partial t} = -\nabla \cdot \left(c \rho v_{Darcy} - \rho D \nabla c\right) + q$$

#### where

Single phase CONVECTIVE FLUX :

$$J_{Darcy} = -\nabla \cdot \left(\frac{\rho}{\mu} k \nabla p\right) \text{ and } v_{Darcy} = -\left(\frac{k}{\mu} \nabla p\right)$$

Single phase DIFFUSIVE FLUX  $J_{Fi}$  (Knudsen diffusion/Slip flow :

$$J_{Fick} = \nabla \cdot (\rho D \nabla c)$$

$$J_a = J_{Convective} + J_{Diffusive}$$

### Darcy flow may be a significant component of coupled flow

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 10 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

#### Flow from Source Boundary to Producing Layer

### Single Phase Flow:

$$\frac{\partial \left(\phi c \rho\right)}{\partial t} = -\nabla \cdot \left(c \rho v_{Darcy}\right) + q$$

#### where

Single phase CONVECTIVE FLUX :

$$J_{Darcy} = -\nabla \cdot \left(\frac{\rho}{\mu} k \nabla p\right) \text{ and } v_{Darcy} = -\left(\frac{k}{\mu} \nabla p\right)$$

$$J_a = J_{Convective}$$

### Diffusive flux may be negligible

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 11 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

#### Flow from Source Rock to Boundary

Single Phase (Gas) Flow:

$$\frac{\partial \left(\phi c \rho\right)}{\partial t} = -\nabla \cdot \left(c \rho v_{Darcy} - \rho D \nabla c\right) + q$$

#### where

Single phase CONVECTIVE FLUX :

$$J_{Darcy} = -\nabla \cdot \left(\frac{\rho}{\mu} k \nabla p\right) \text{ and } v_{Darcy} = -\left(\frac{k}{\mu} \nabla p\right)$$

Single phase DIFFUSIVE FLUX  $J_{Fi}$  (Knudsen diffusion/Slip flow) :

$$J_{Fick} = \nabla \cdot (\rho D \nabla c)$$

$$J_a = J_{Convective} + J_{Diffusive}$$

### Diffusive flow may be a significant component of coupled flow

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 12 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

Flow from Source Rock to Boundary & from Producing Layer to Fracture

Multi Phase Flow (Below Bubble Point):

Above bubble point (single-phase oil), diffusive flow components are negligible

Below bubble flow, diffusive flux may include concentration driven and osmotic components

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 13 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# **Single Phase Mathematical Model**

### Coupling of flows in four linear flow regions

- Linear flow from source rock to boundary layer
- Linear flow from boundary layer to producing layer
- Linear flow from producing layer to hydraulic fracture
- Linear flow in hydraulic fracture to horizontal well (with choking skin)

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 14 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

### **Planned Work**

- Complete the derivation of the single-phase flow model
- Build and test the computational code
- Run sensitivity analyses to assess the relative contribution of each coupled flow
- Investigate the contribution of the source rock
- Develop a methodology to analyze and interpret production data
- Start planning multi-phase flow modeling

UNCONVENTIONAL RESERVOIR ENGINEERING PROJECT 15 Fall 2013 Semi-Annual Affiliates Meeting, November 7-8, 2013, Golden, Colorado

# Thank you
