

# Reservoir Characterization of the Shannon Sandstone, Southwestern Powder River Basin, Wyoming

Rebekah Parks

M.S. Geology, May 2023

COLORADO SCHOOL OF  
**MINES**  
**MUDTOC**

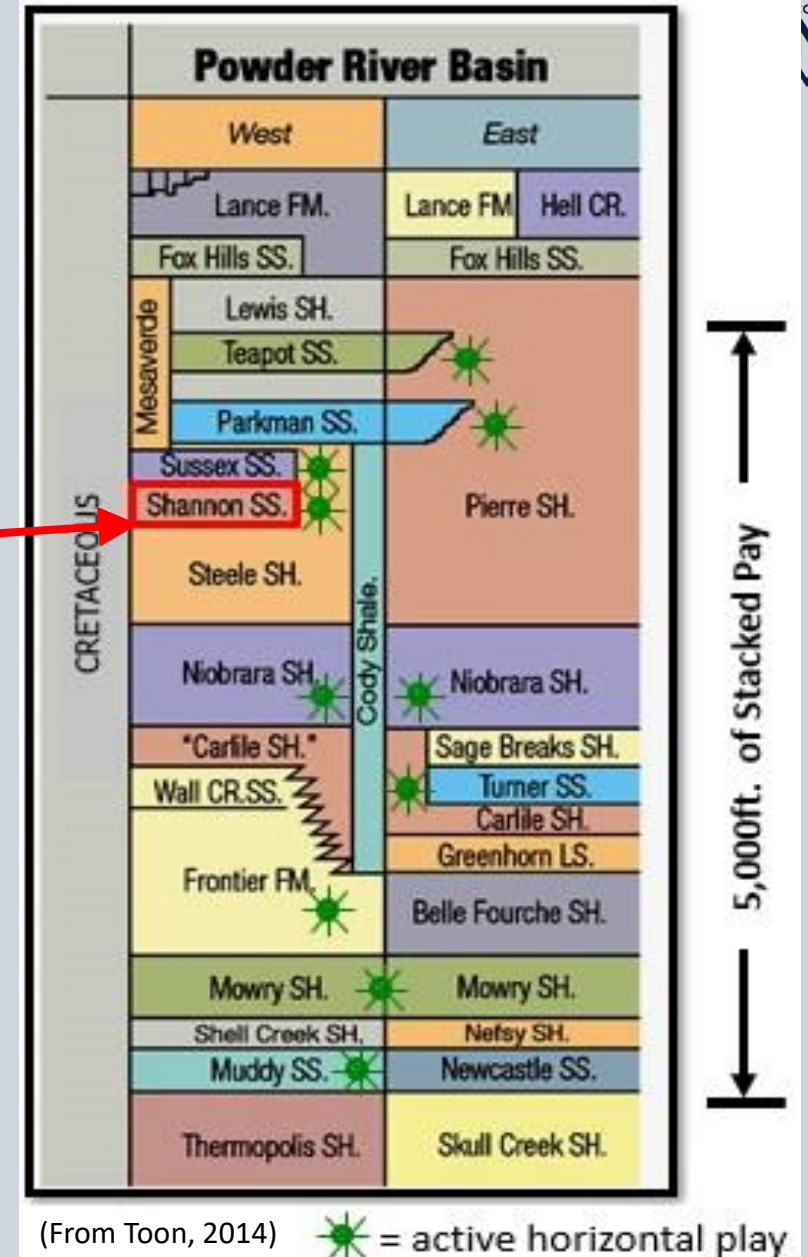

# Presentation Outline

- Purpose & Objectives
- Introduction & Regional Geology
- Study Area
- Continued Work
  - Cores at the CRC
  - Shannon production

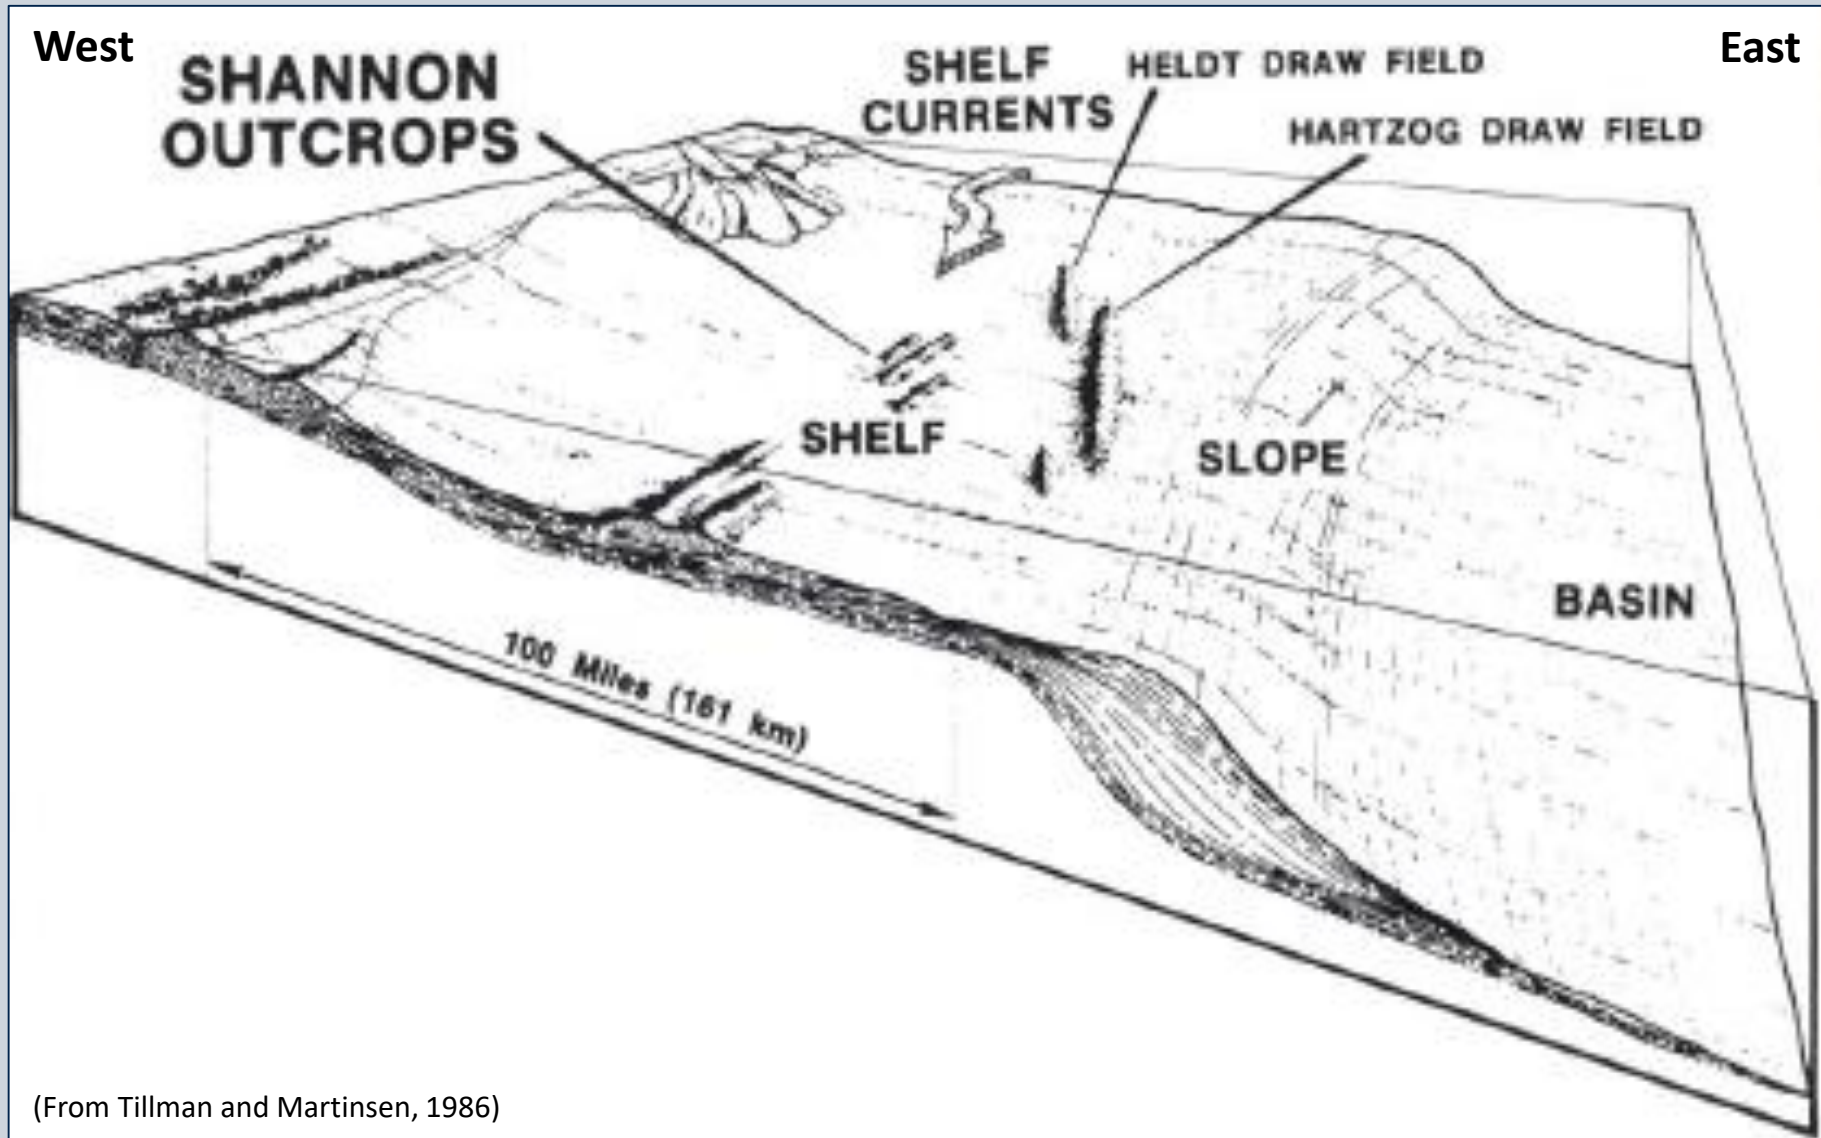

# Purpose & Objectives

- Reservoir Characterization
  - Define Shannon Sandstone
    - Petrographic analysis
    - Petrophysics analysis
  - Geomechanical properties and stratigraphic interpretation
  - Characterization of lateral and vertical variability
  - Assess petroleum potential
    - Maximize efficiency & production

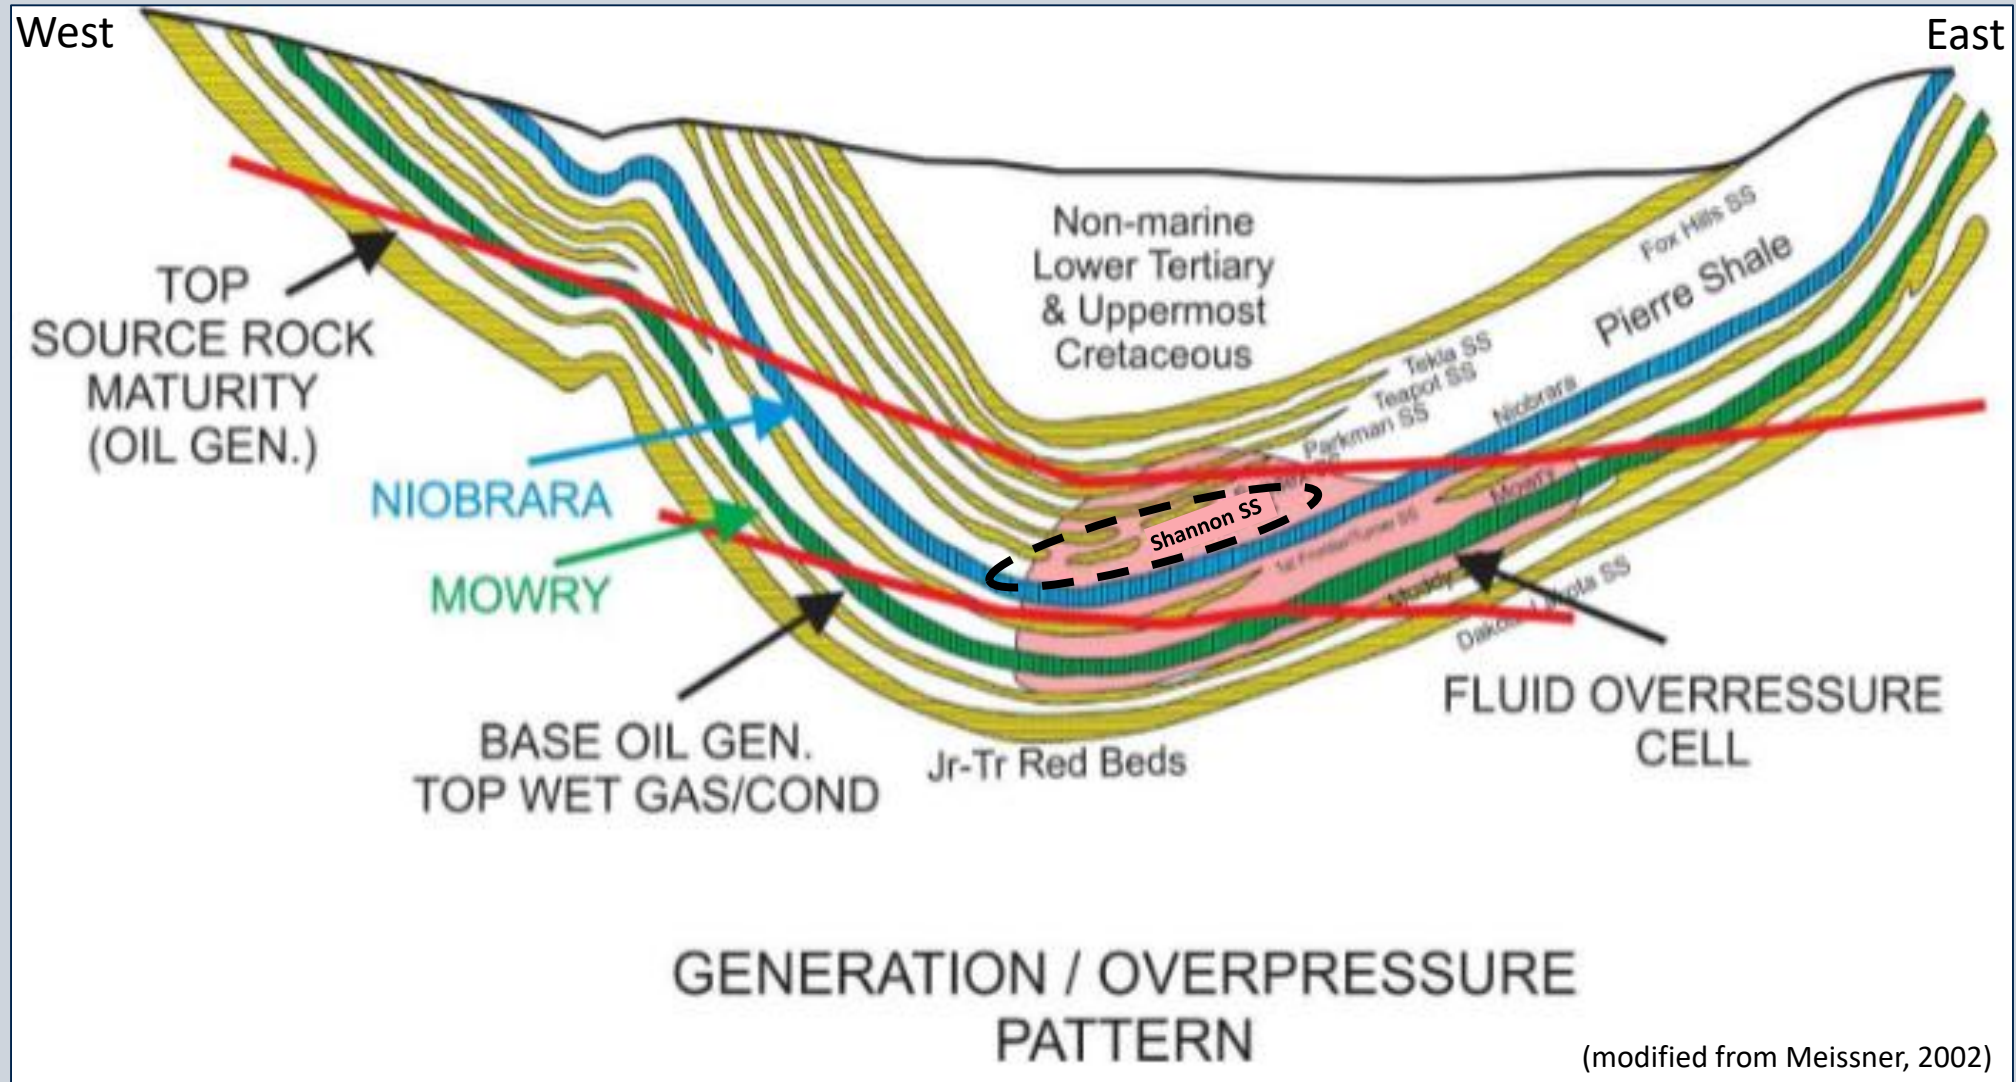

# Regional Geology

# Shannon Sandstone

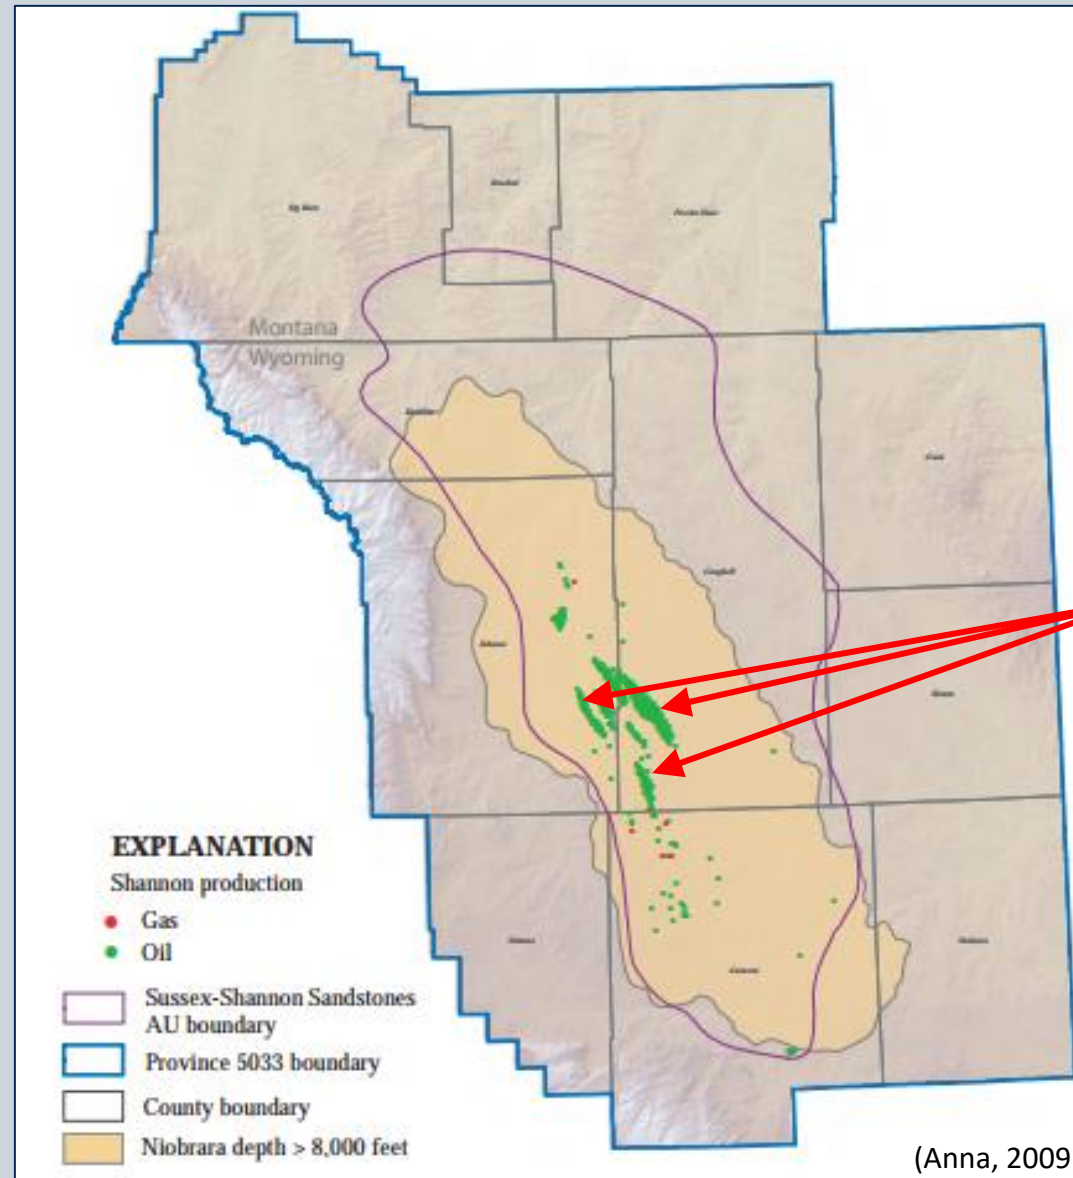

# Halo Play

$$\varphi = \sim 0 \text{ to } > 20\%$$

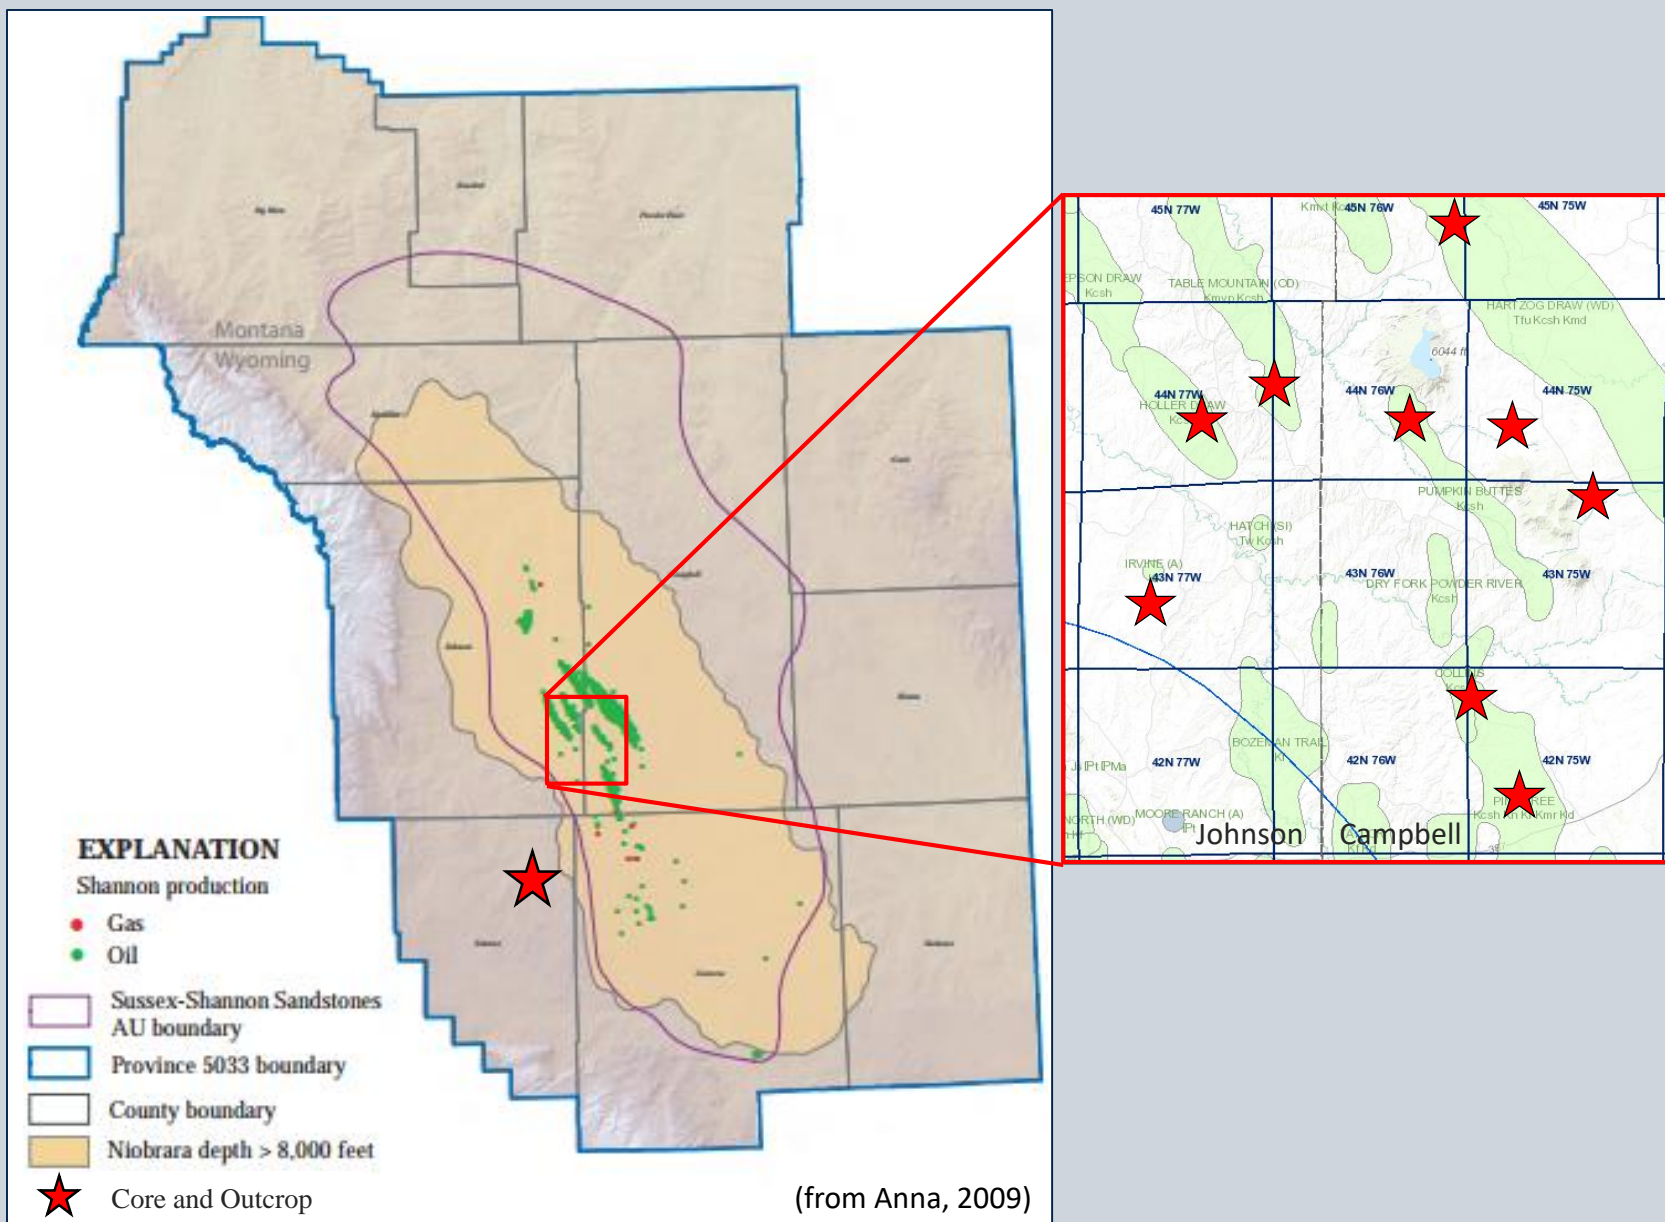

$$k = < 1 \text{ to } 100 \text{ mD, } 20 \text{ mD avg}$$

# Shannon Production

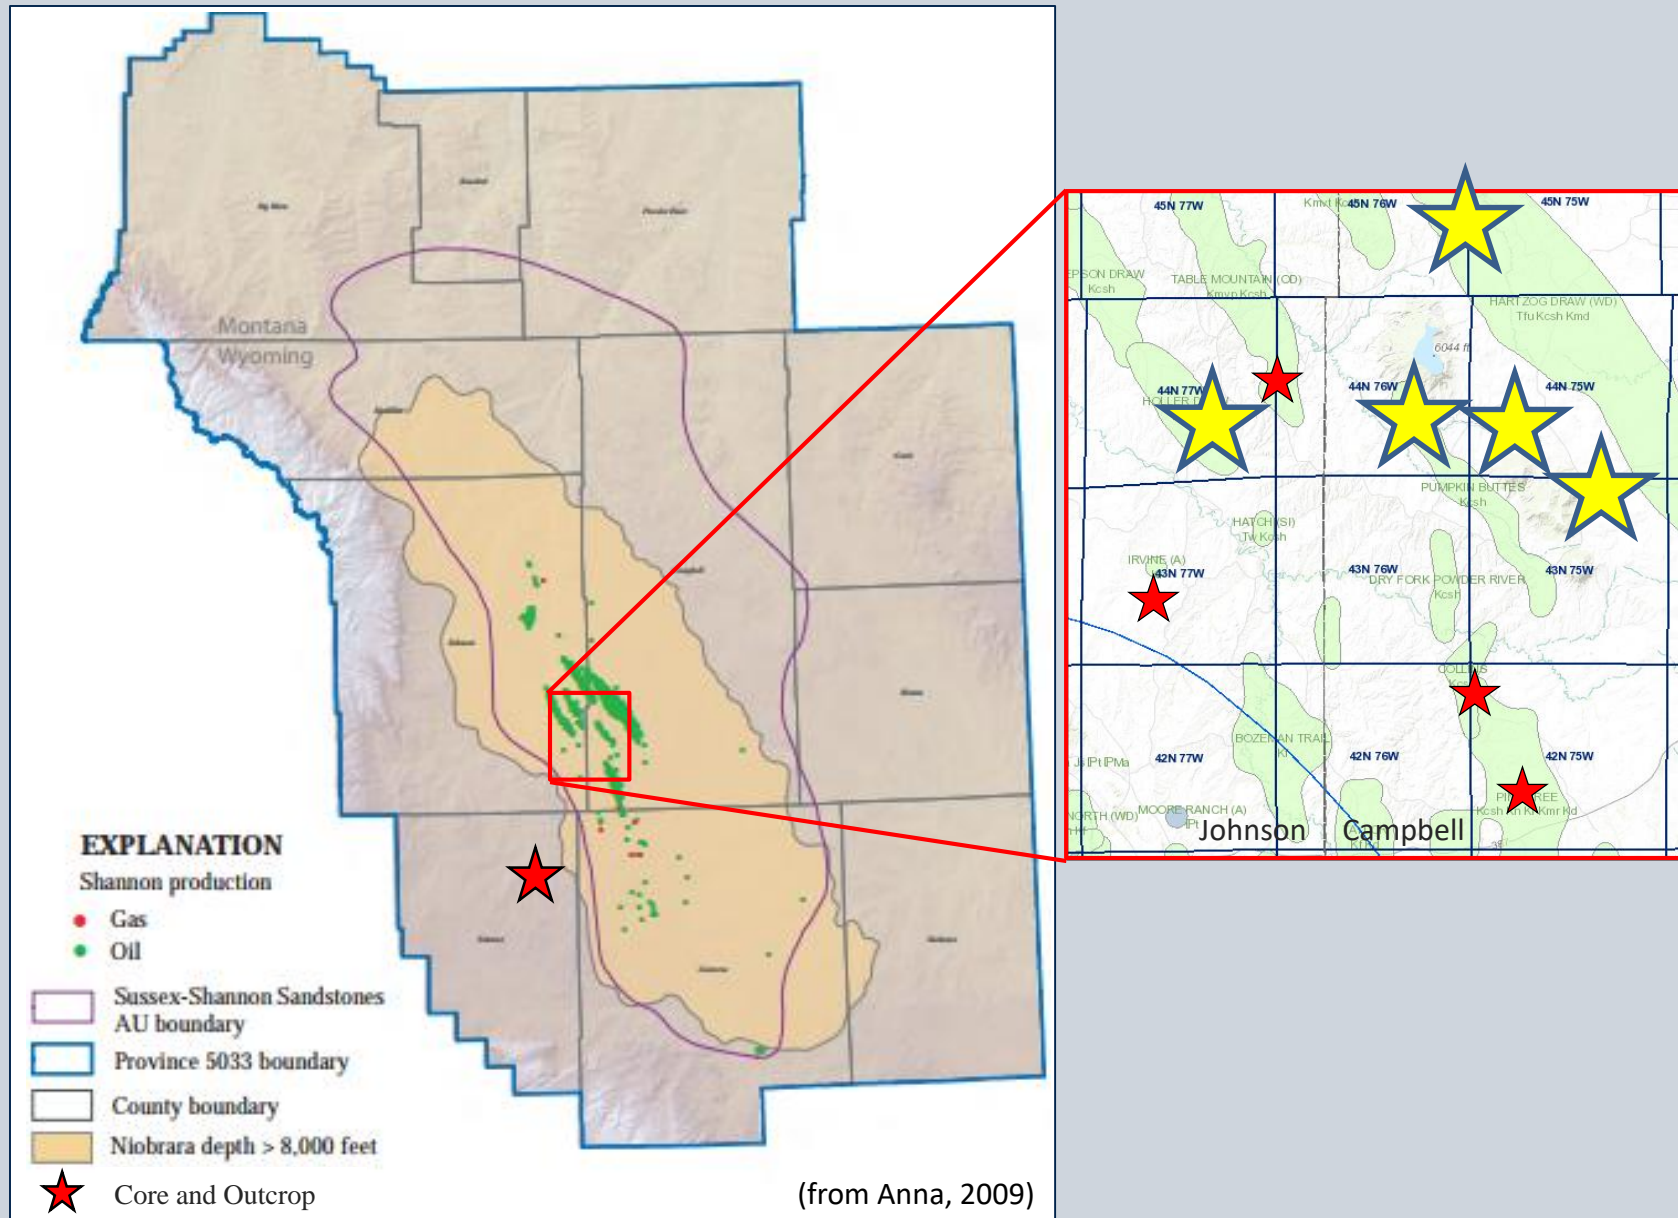

Jepsen-Holler,  
Hartzog Draw, and  
Pine Tree fields

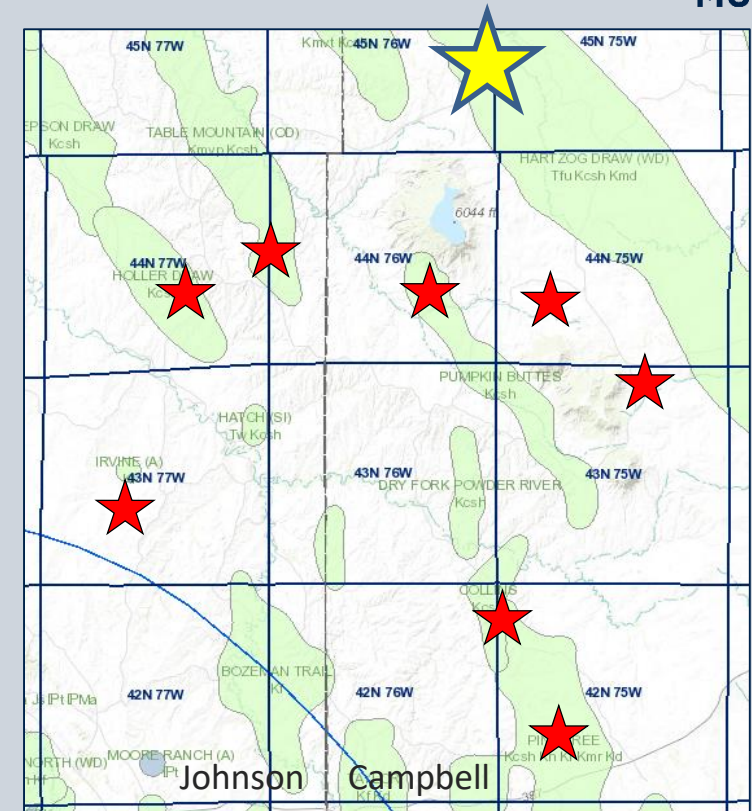

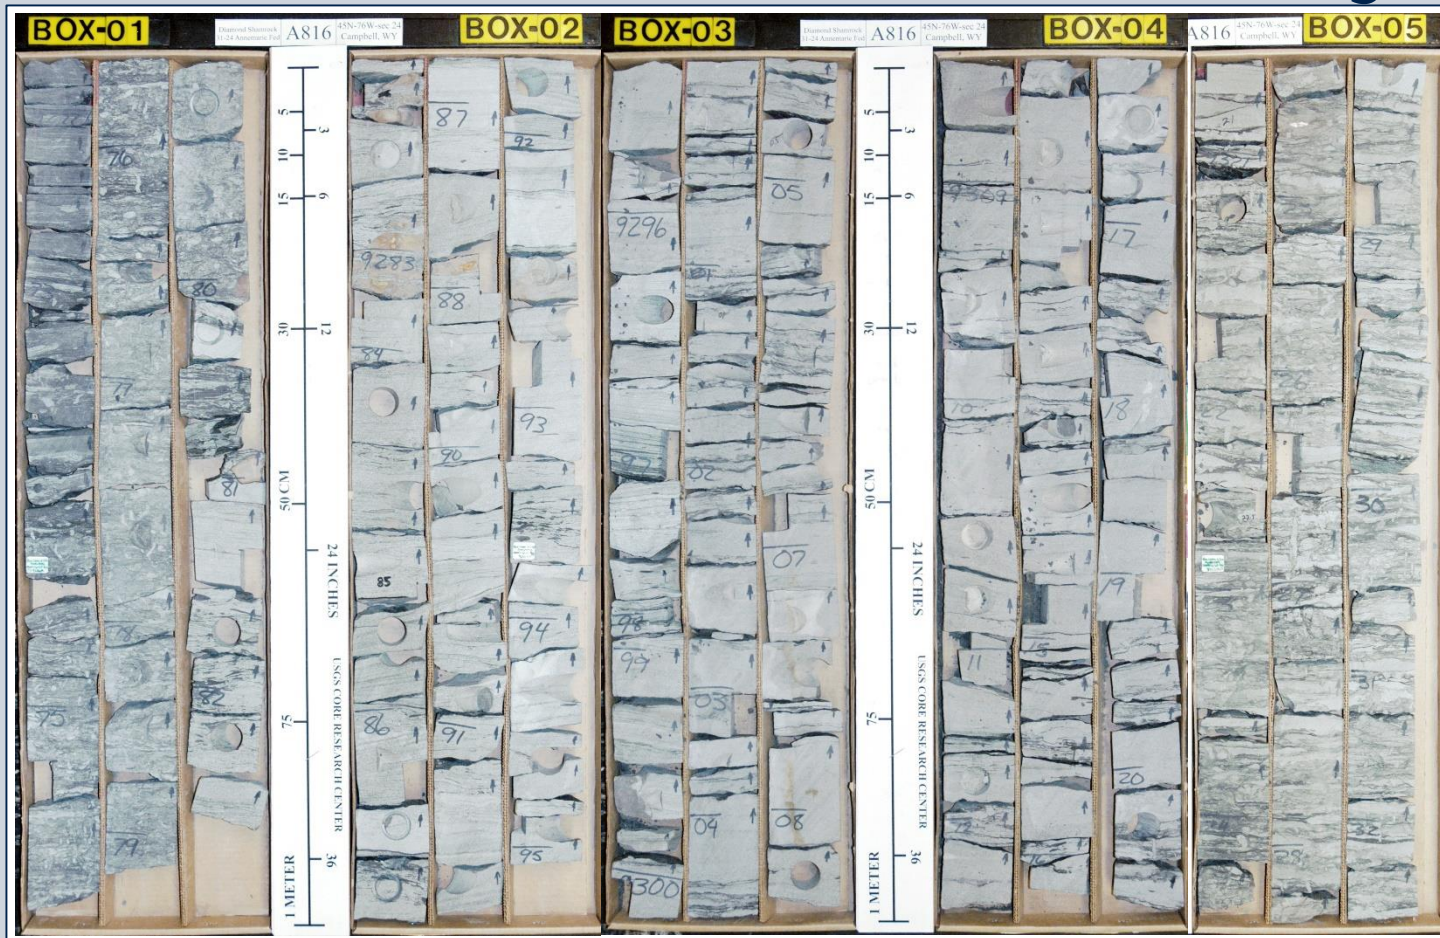

# Study Area

# Study Area

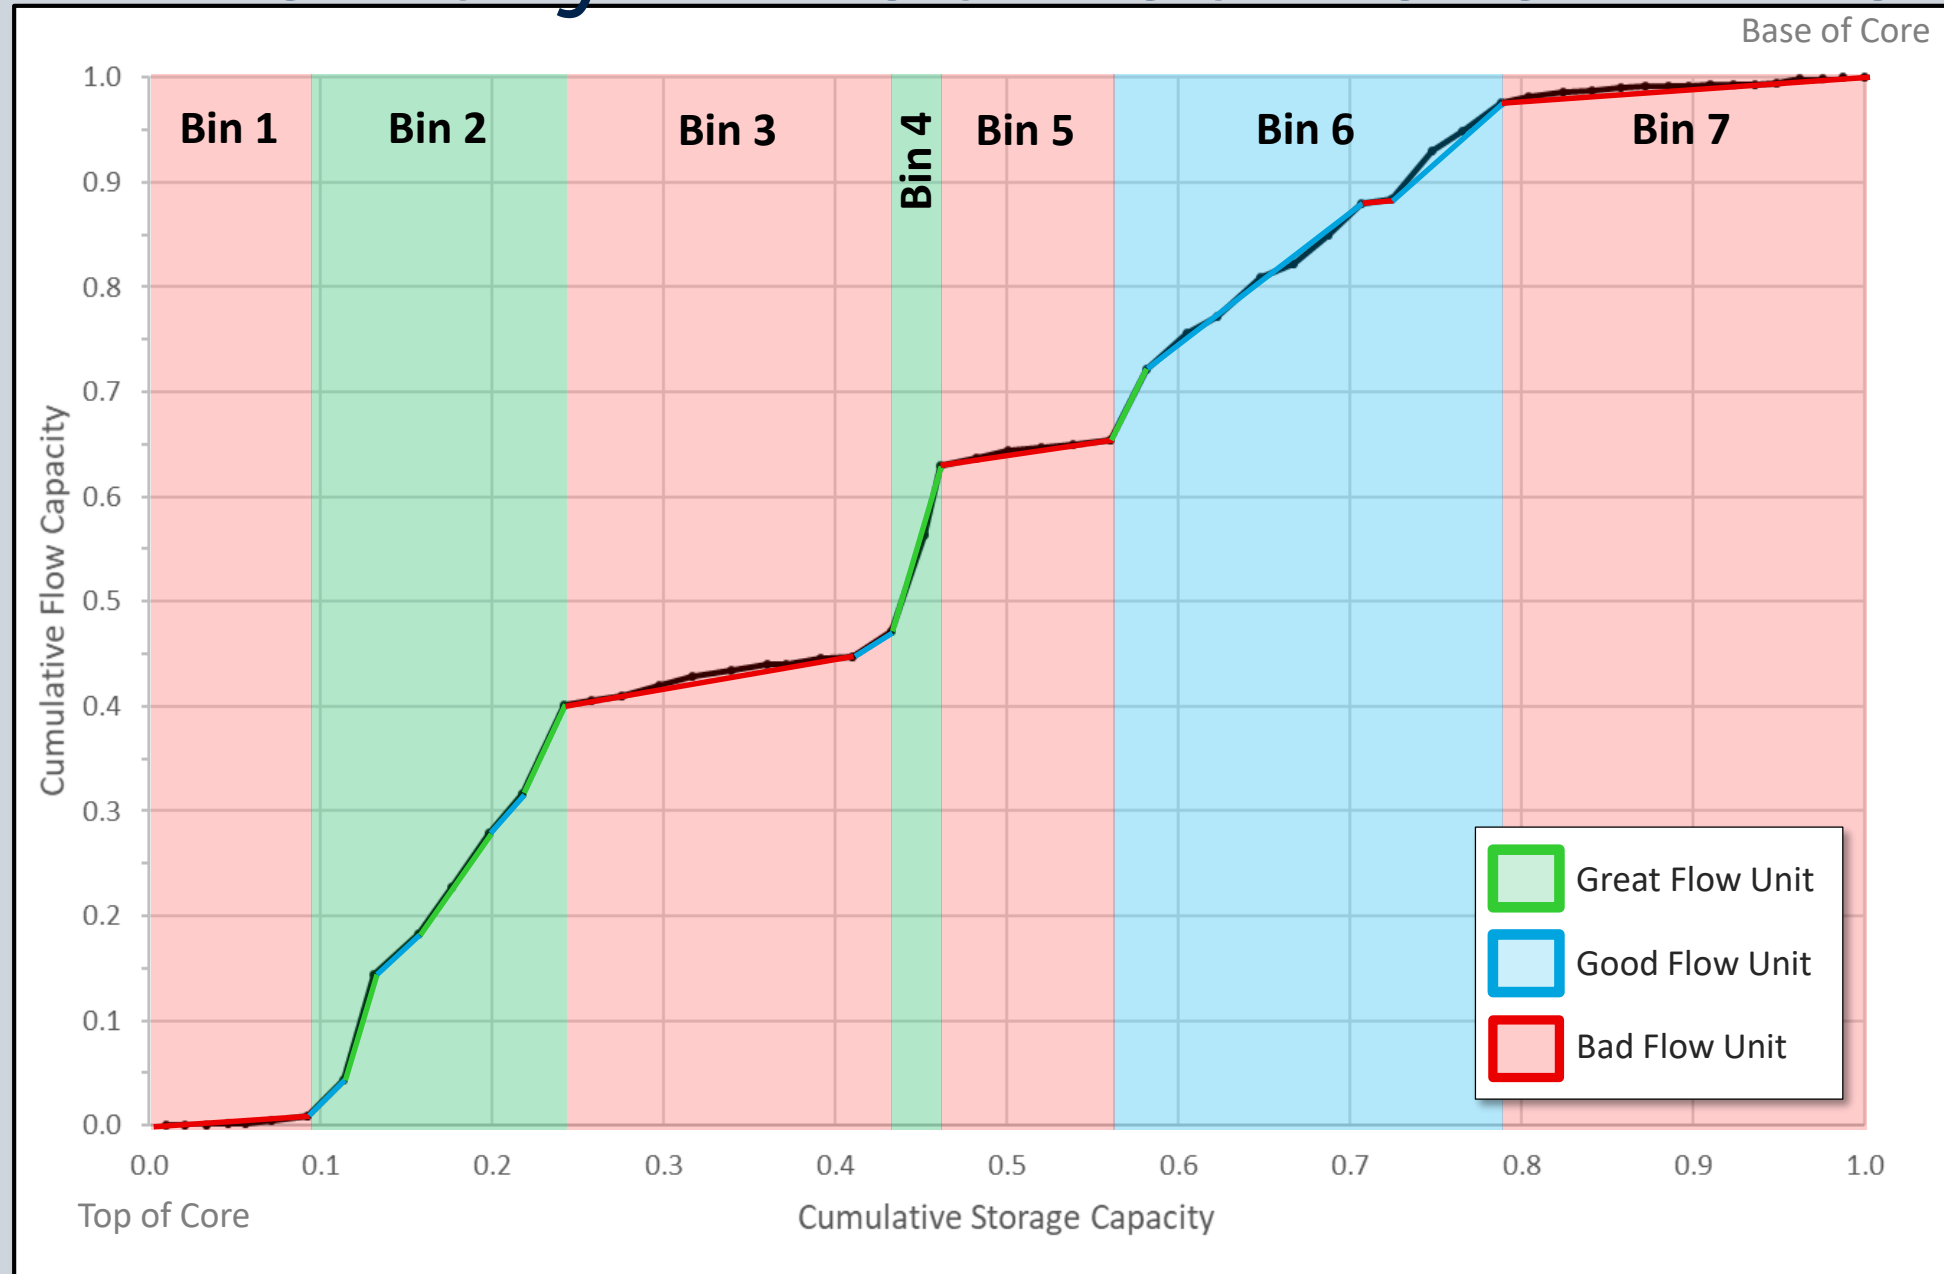

# 31-24 Anniemary Federal

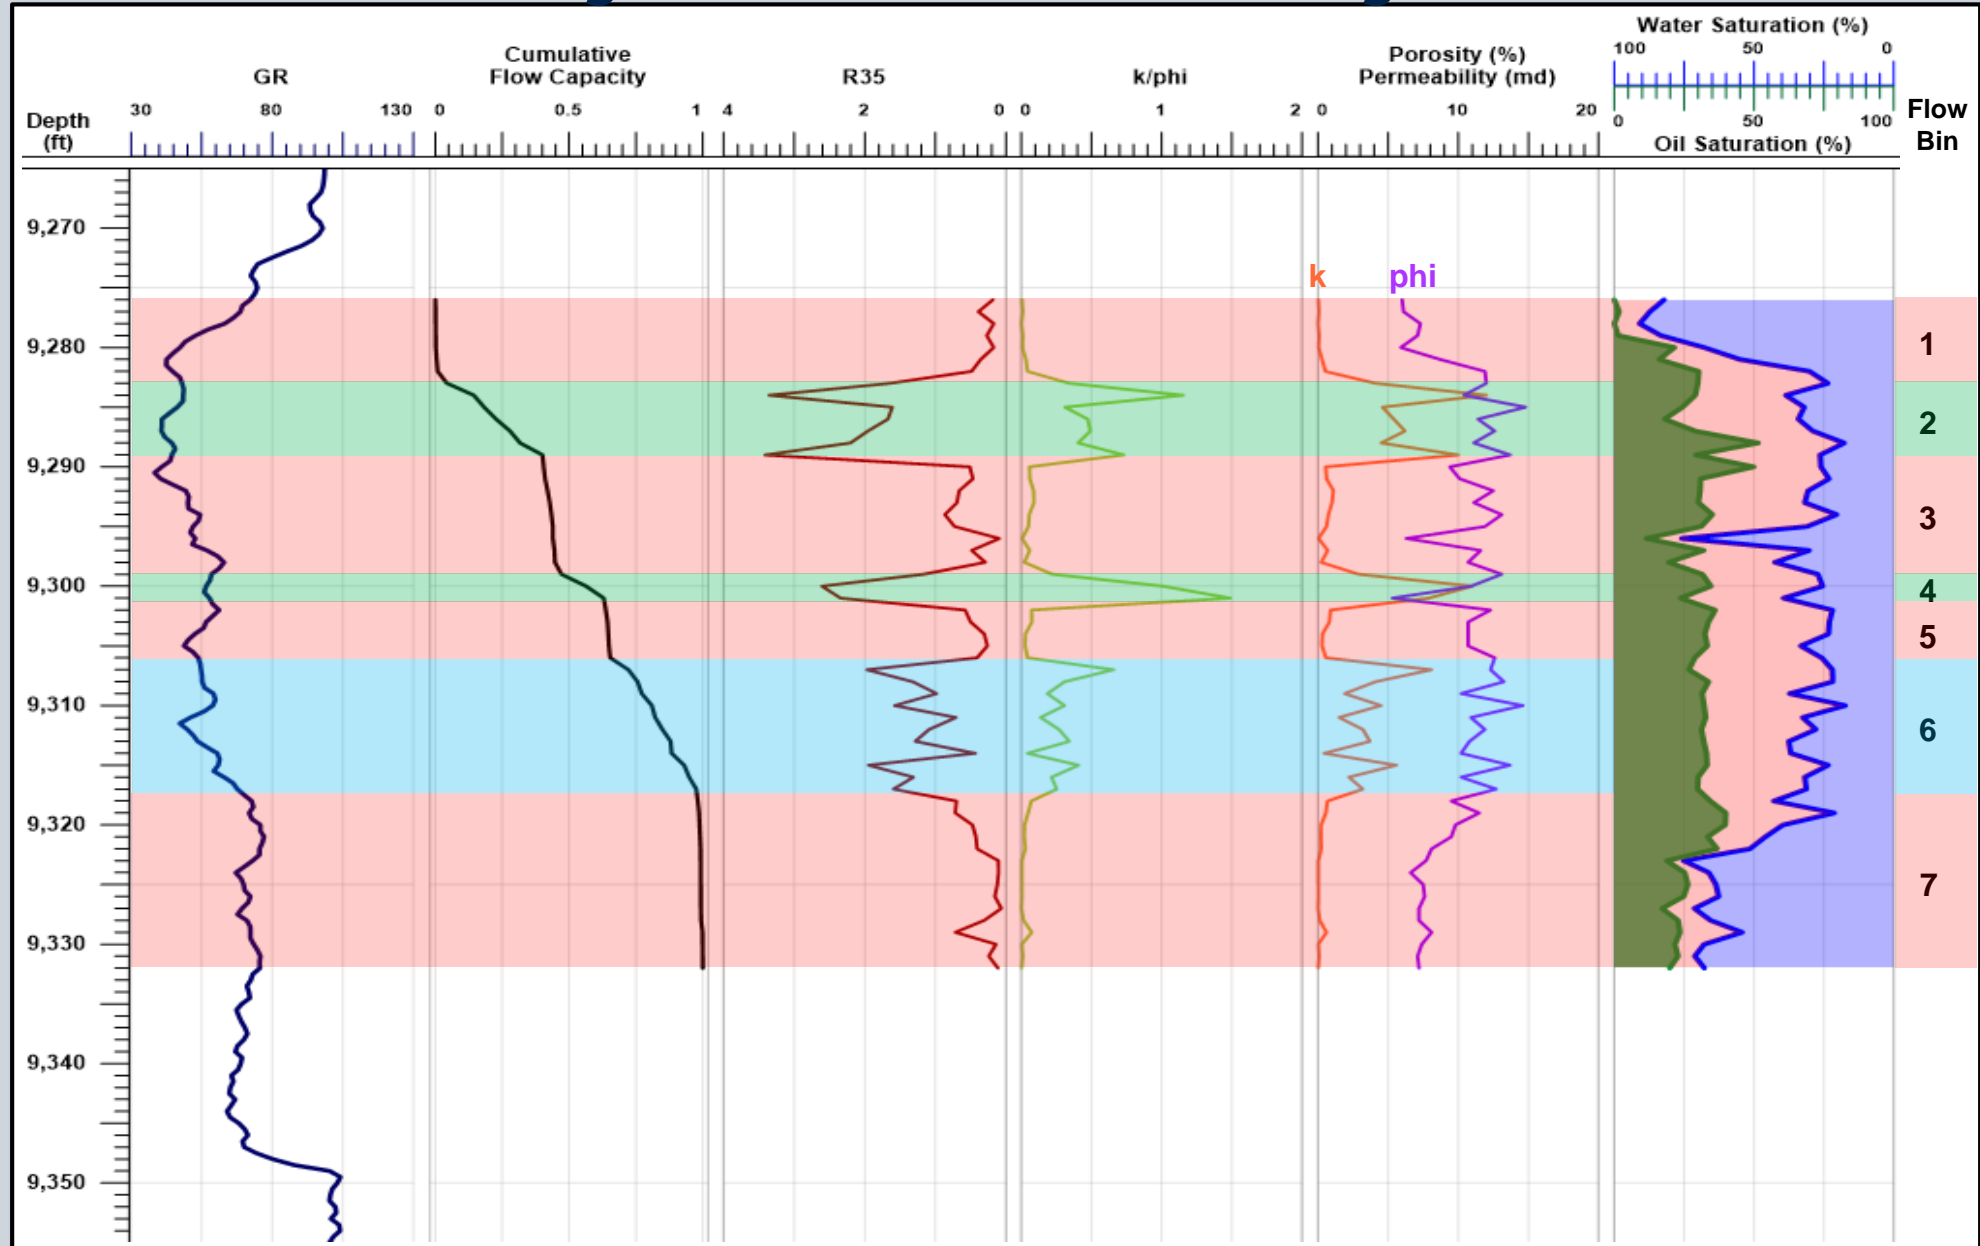

## 31-24 Anniemary Well

- Northernmost part of the study area
- T45N R76W, Johnson County, section 24
- Available data: XRD, 20 thin sections, and 60' of core

# Anniemary - Modified Lorenz Plot

# Anniemary - Core Analysis Plots

# Anniemary Facies

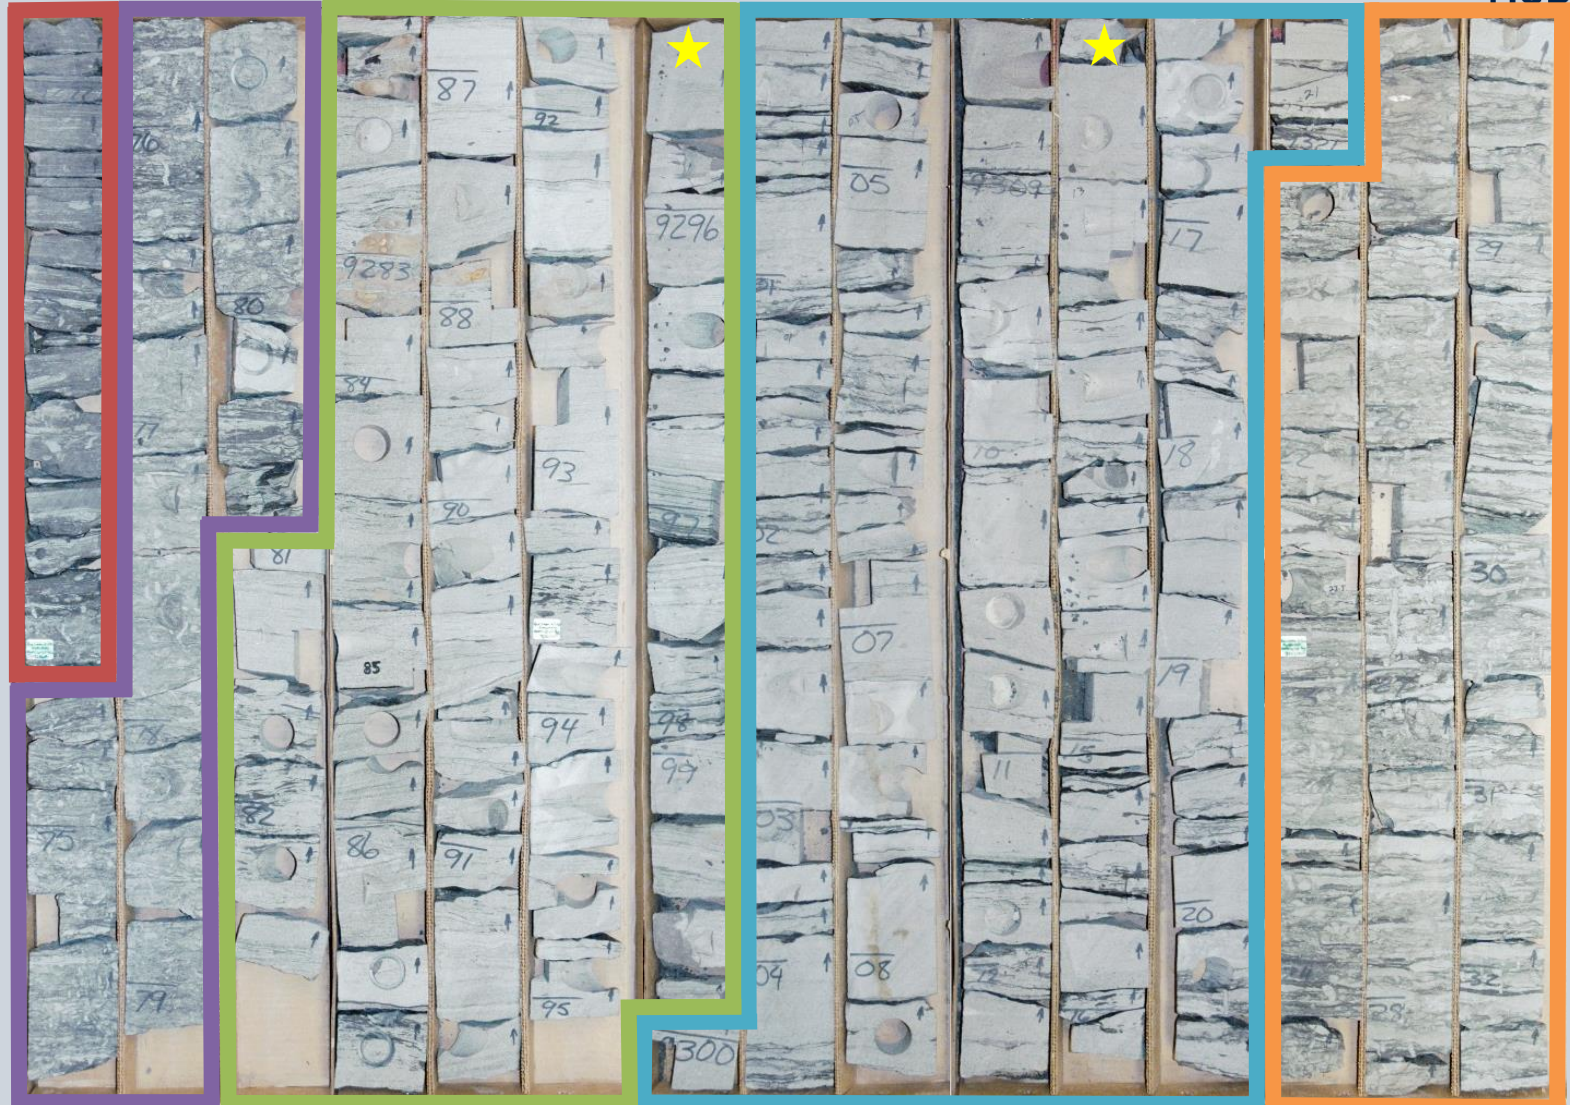

Facies 5: Laminated silty shale

Facies 4: Heavily bioturbated silty sand

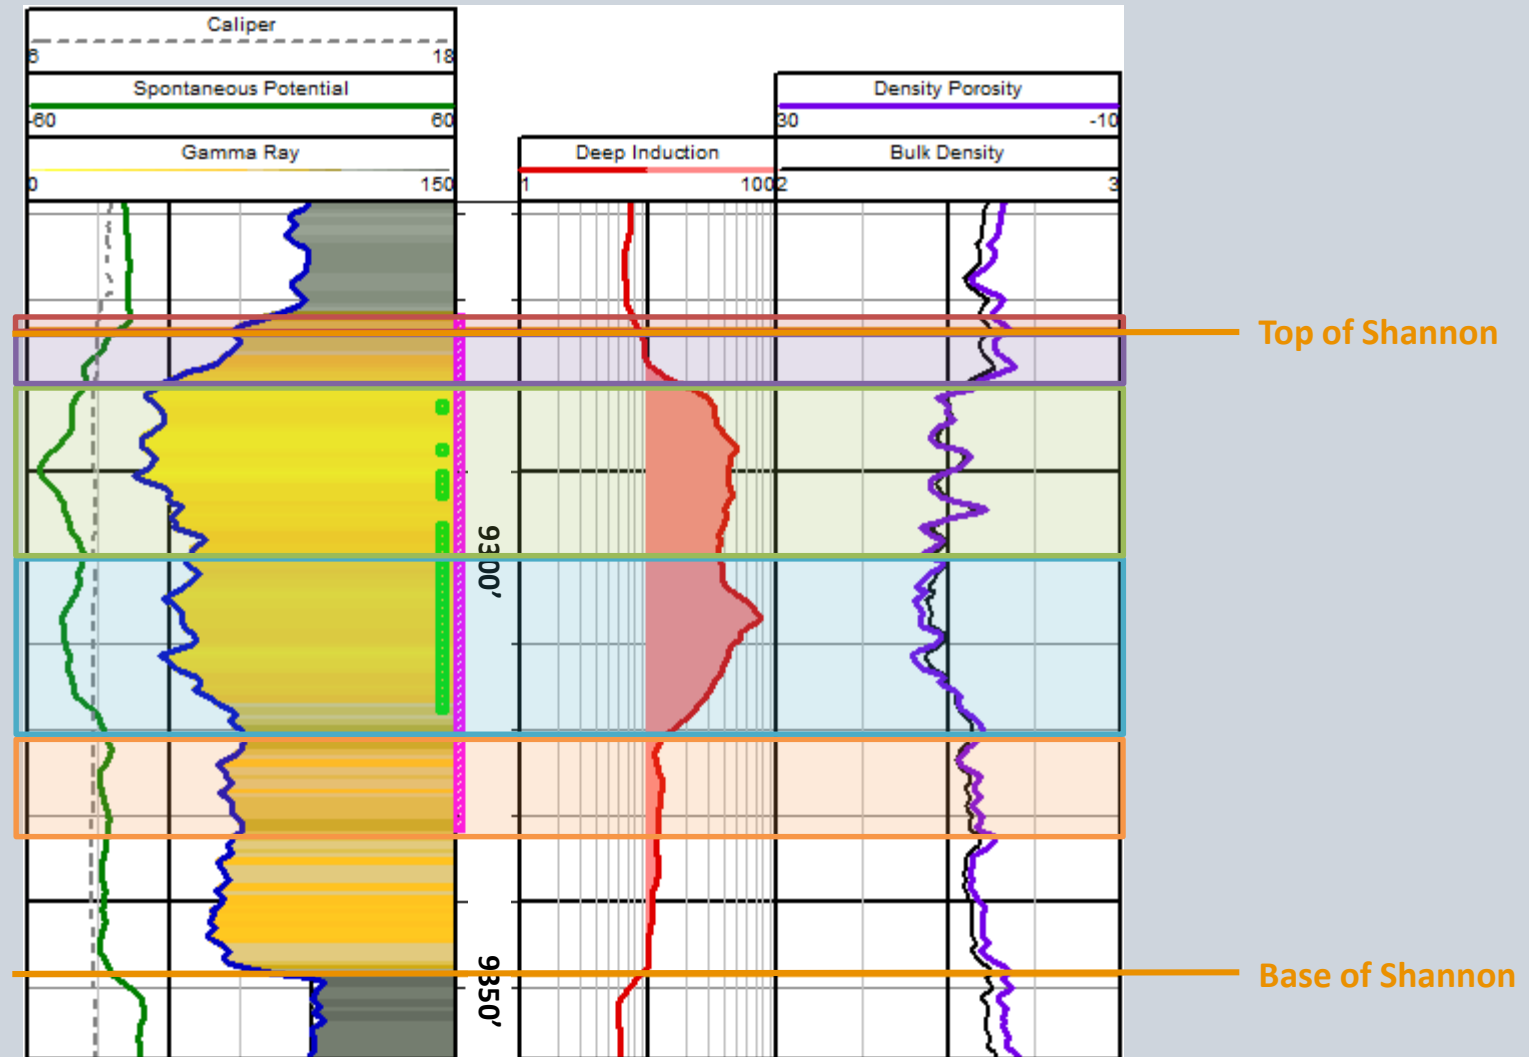

Facies 3: Glauconitic planar to low angle cross-stratified heterolithic sand

Facies 2: Planar to low angle cross-stratified heterolithic sand

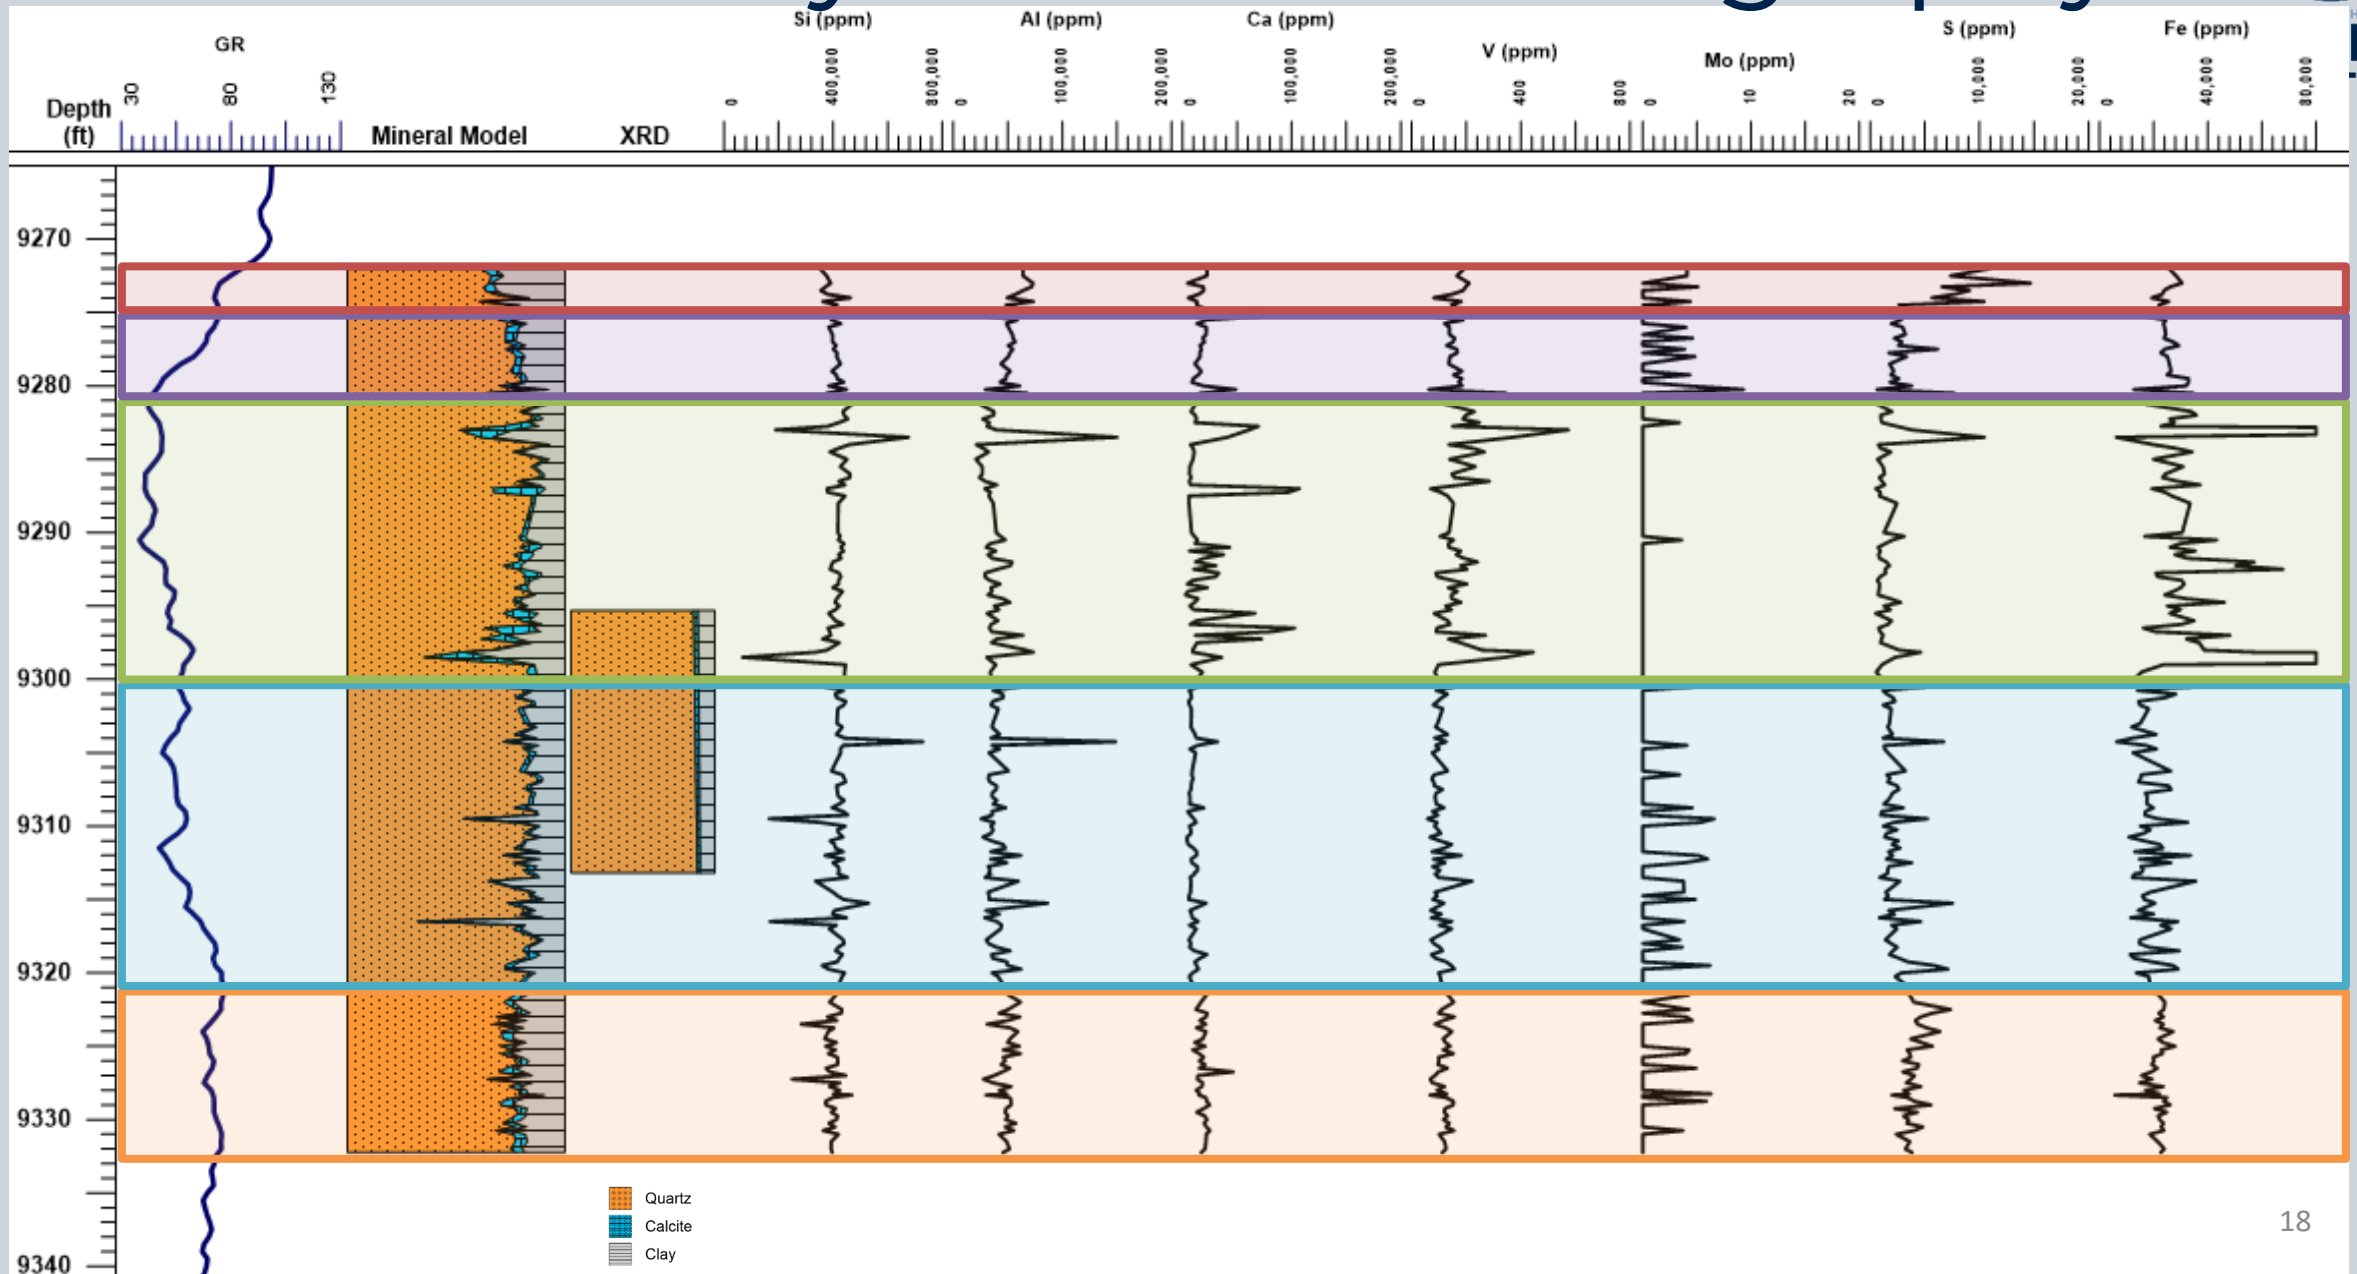

Facies 1: Moderately bioturbated silty sand

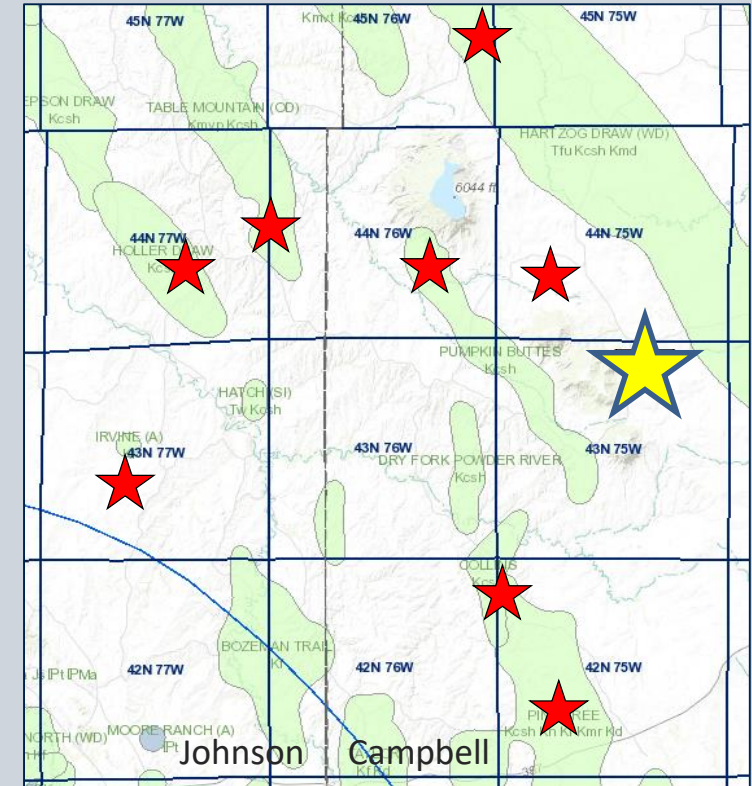

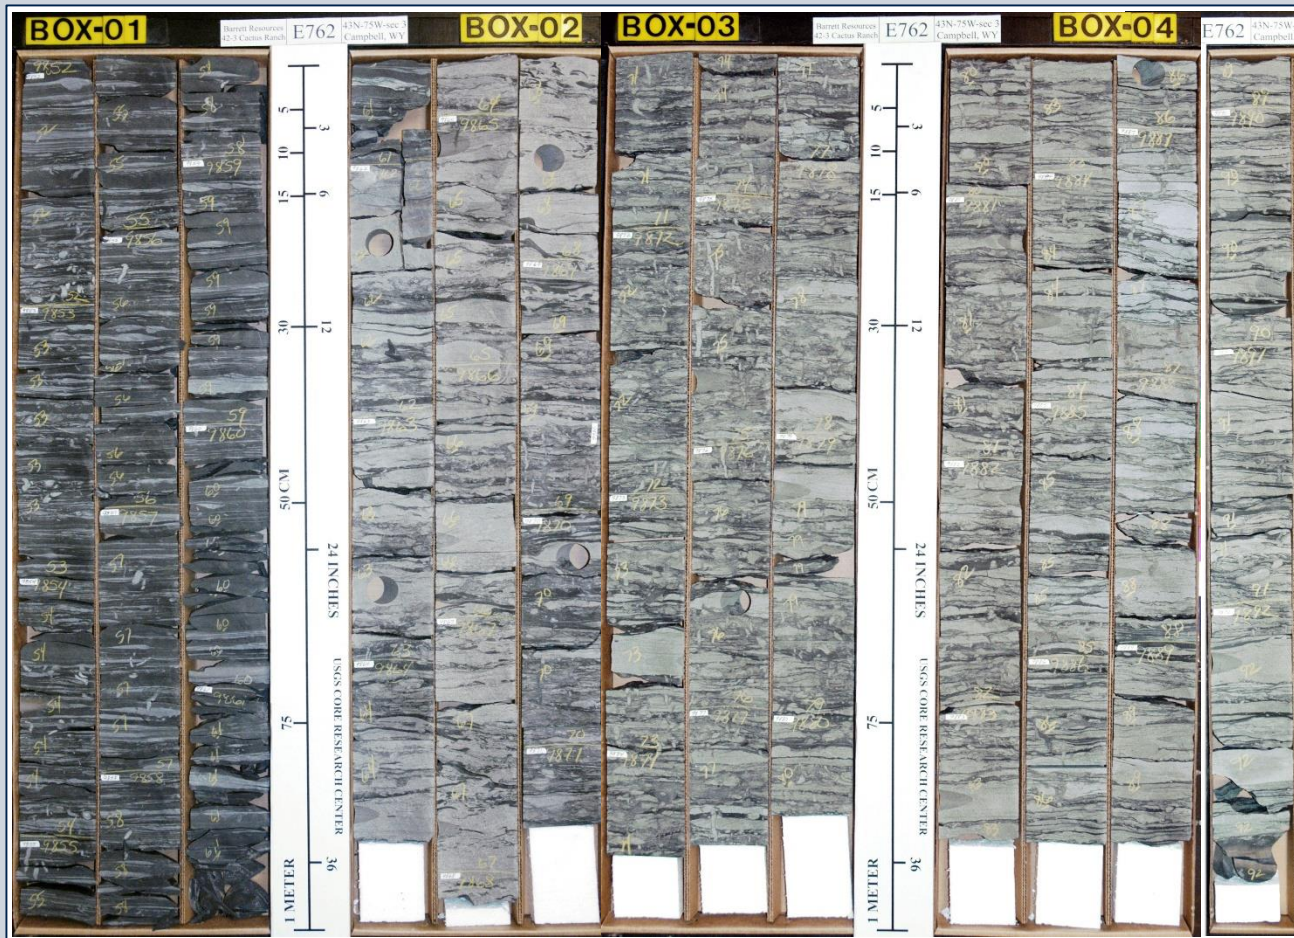

# Anniemary Logs

# Anniemary - Chemostratigraphy

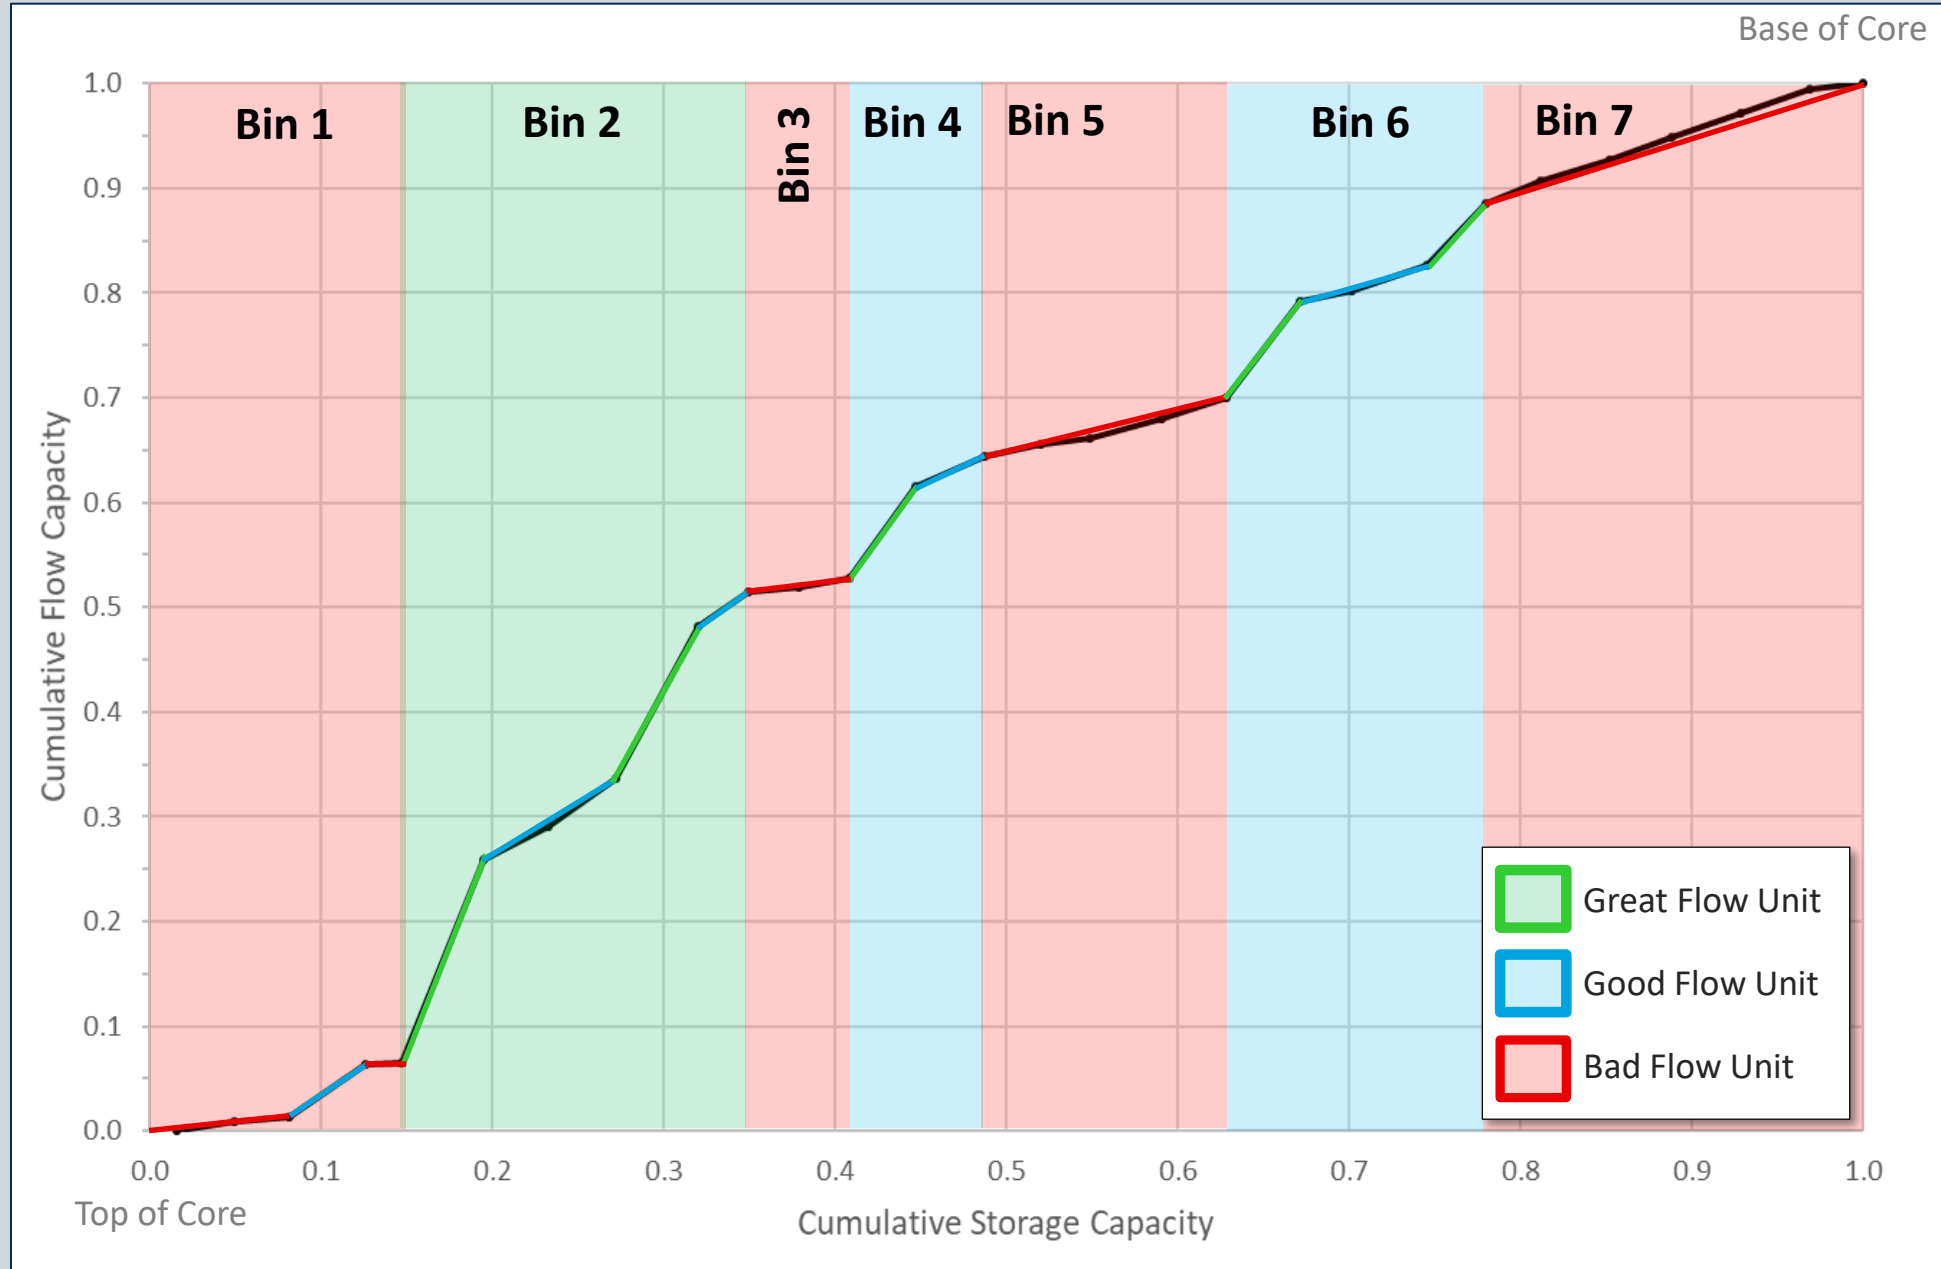

# 42-3 Cactus Ranch

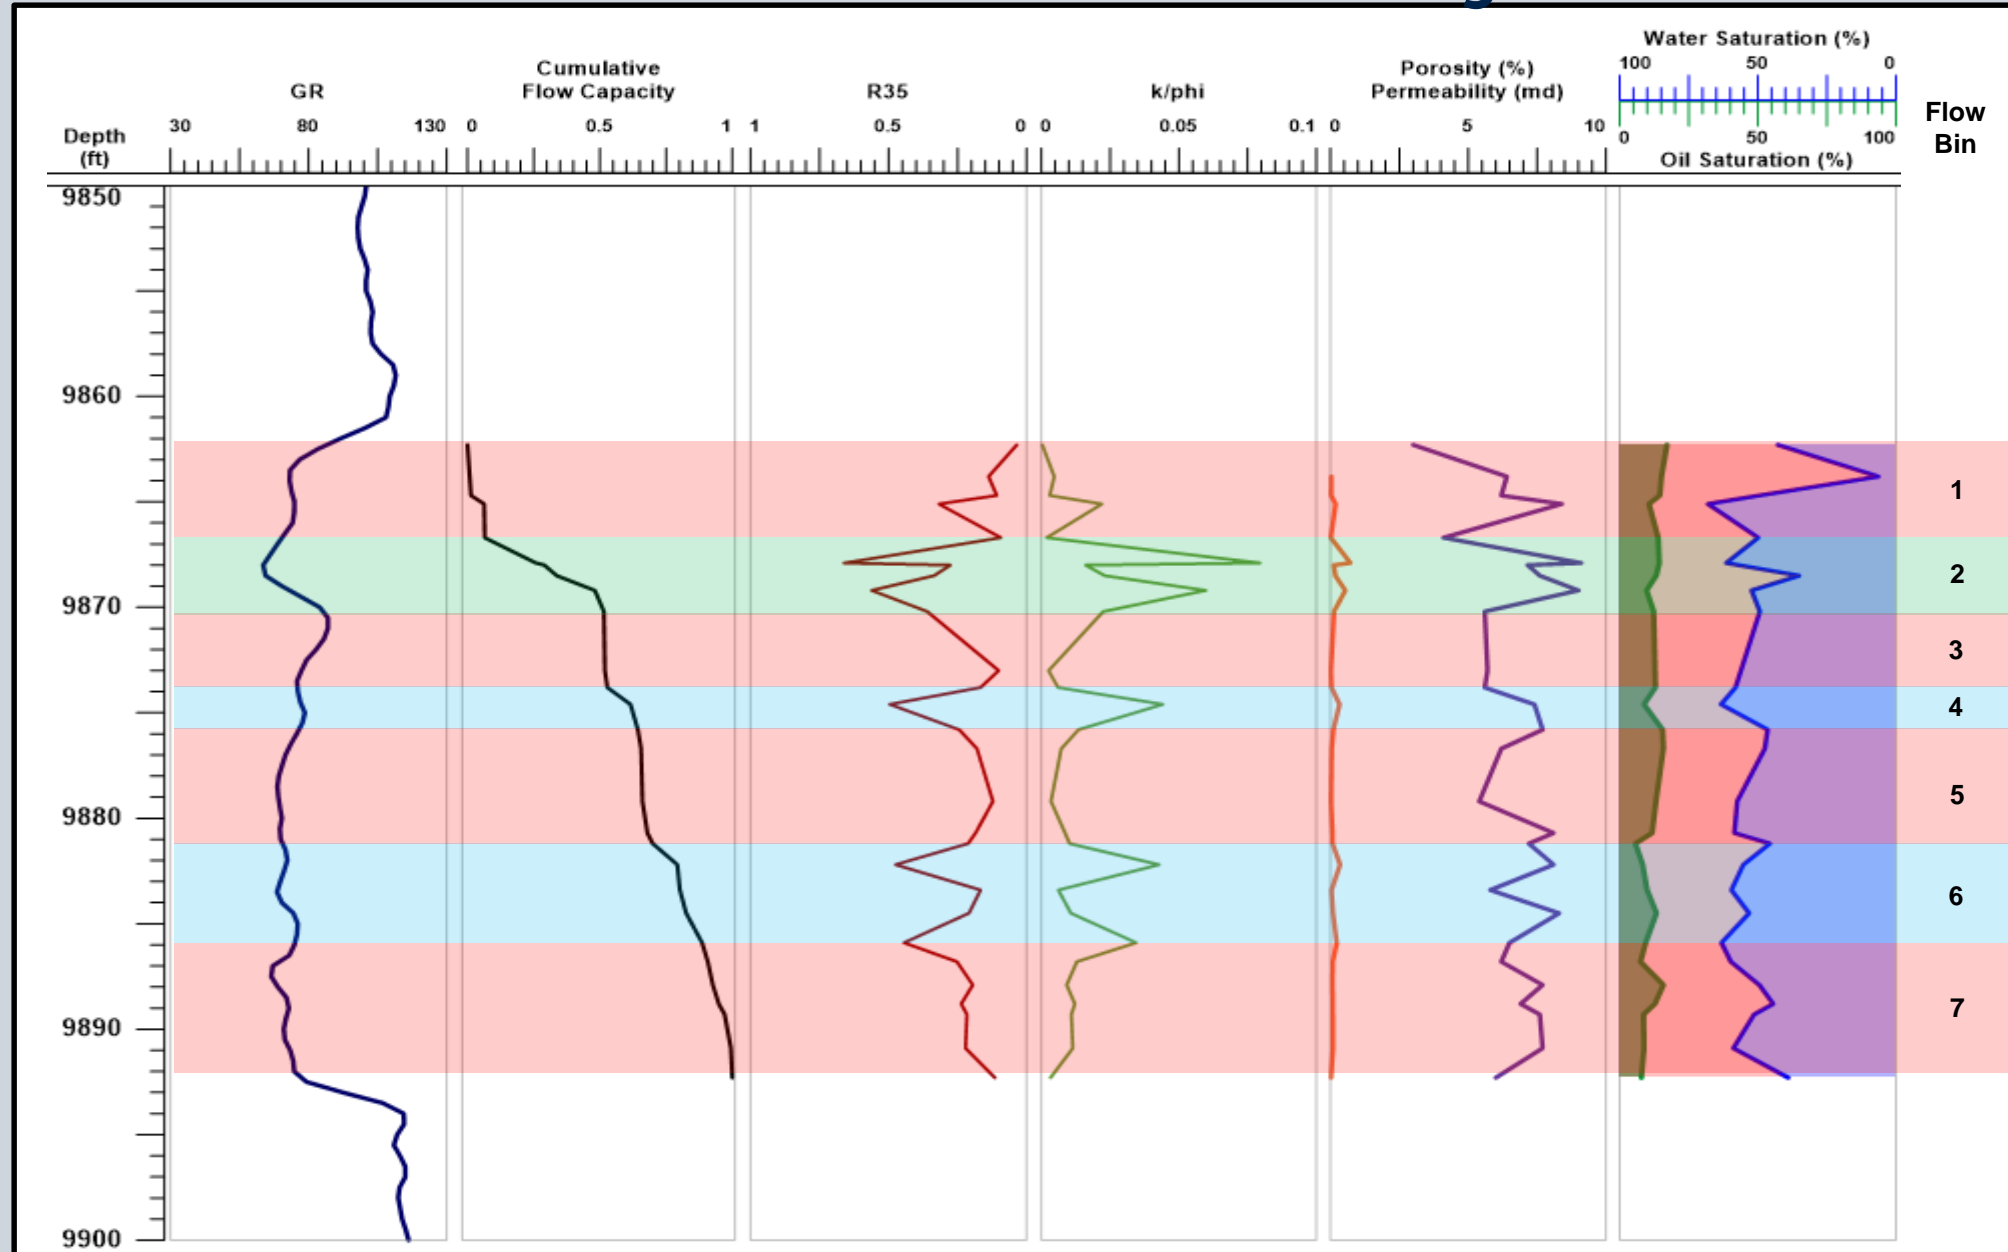

## 42-3 Cactus Ranch

- Eastern part of the study area
- T43N R75W, Campbell County, section 3
- Available data: XRD, 4 thin sections, and 40' of core

# Cactus Ranch - Modified Lorenz Plot

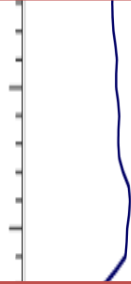

# Cactus Ranch - Core Analysis Plots

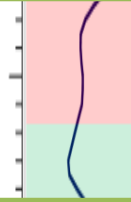

# Cactus Ranch Facies

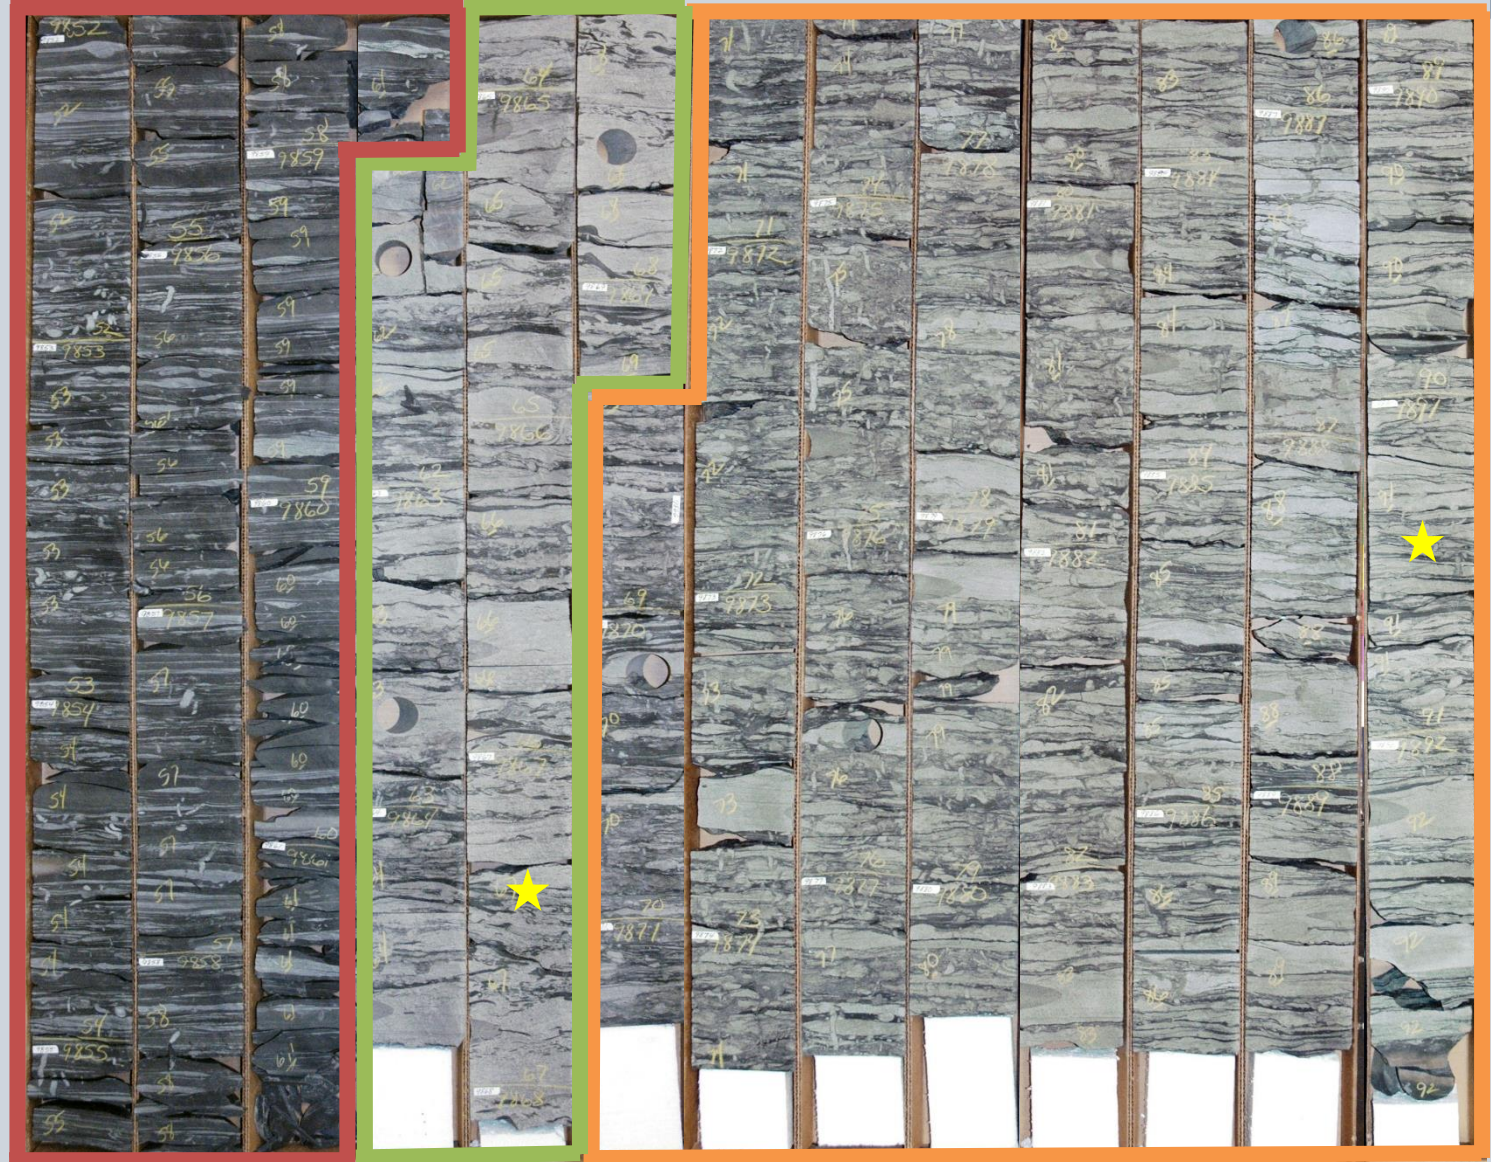

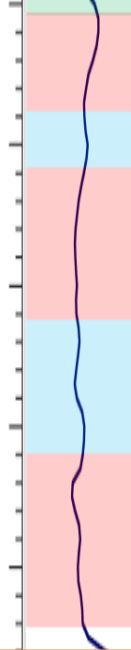

Facies 5: Laminated silty shale

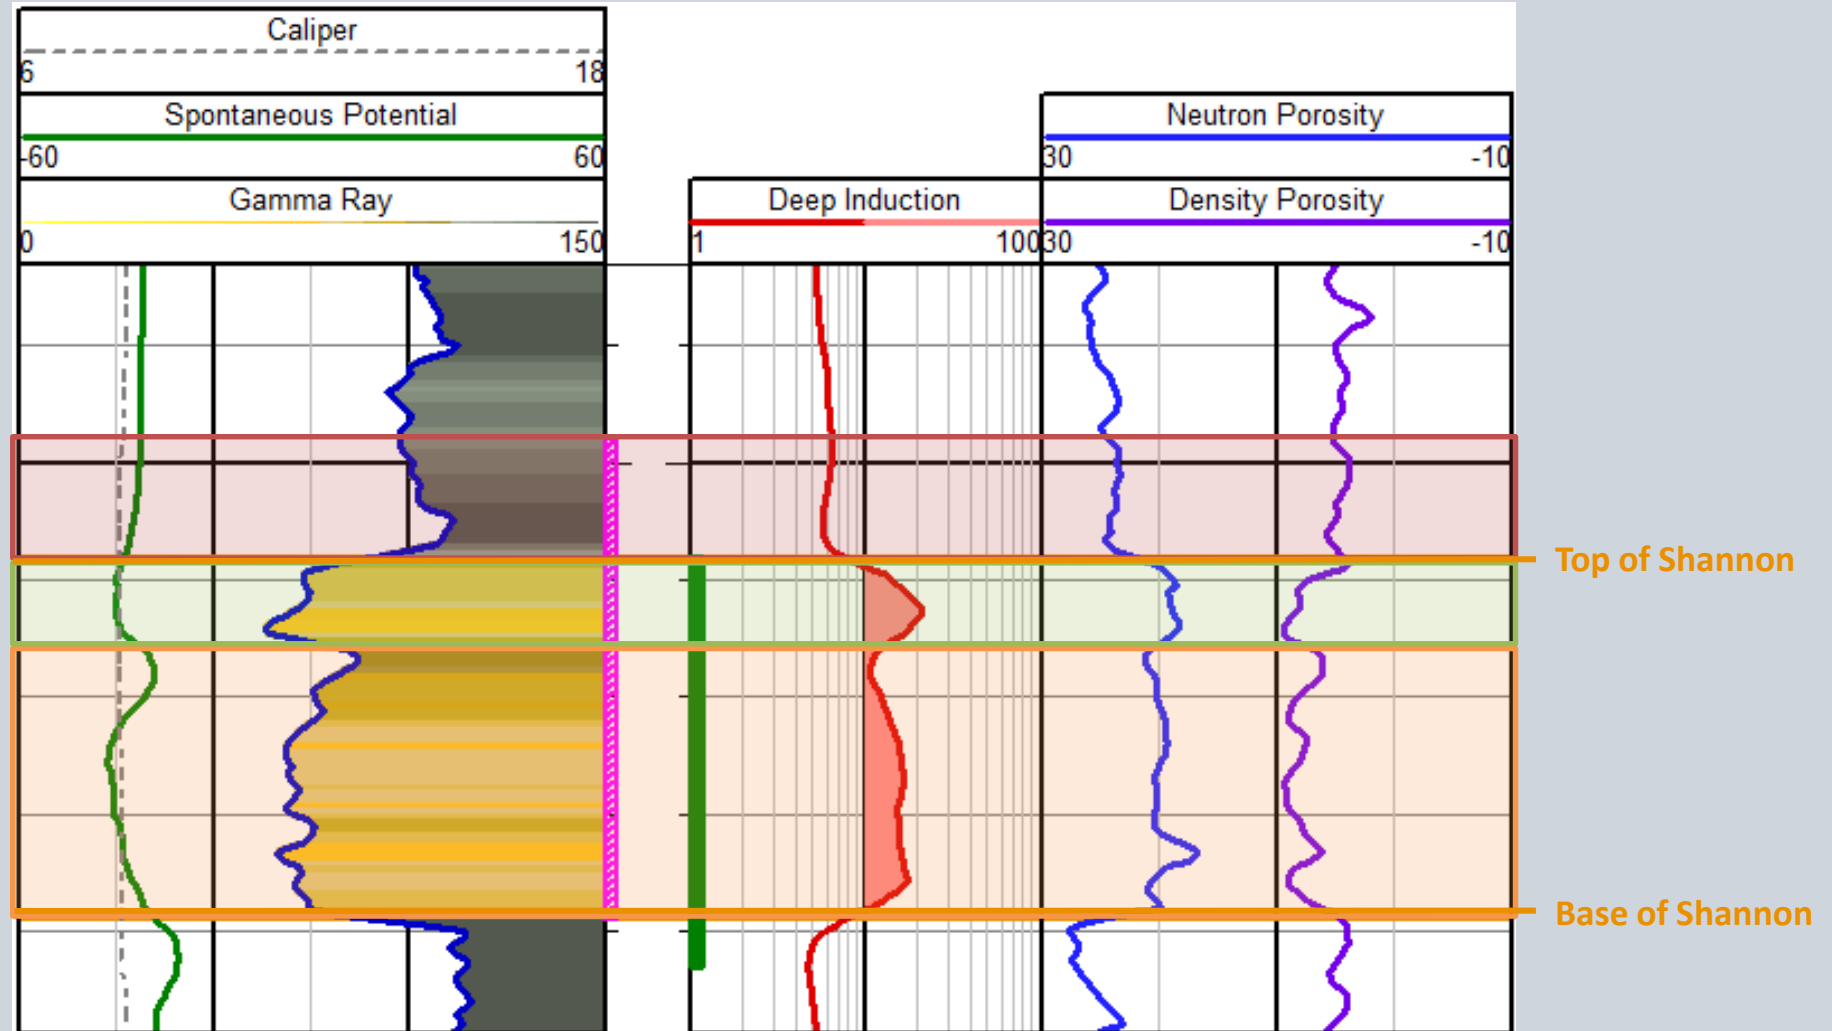

Facies 3: Glauconitic planar to low angle cross-stratified heterolithic sand

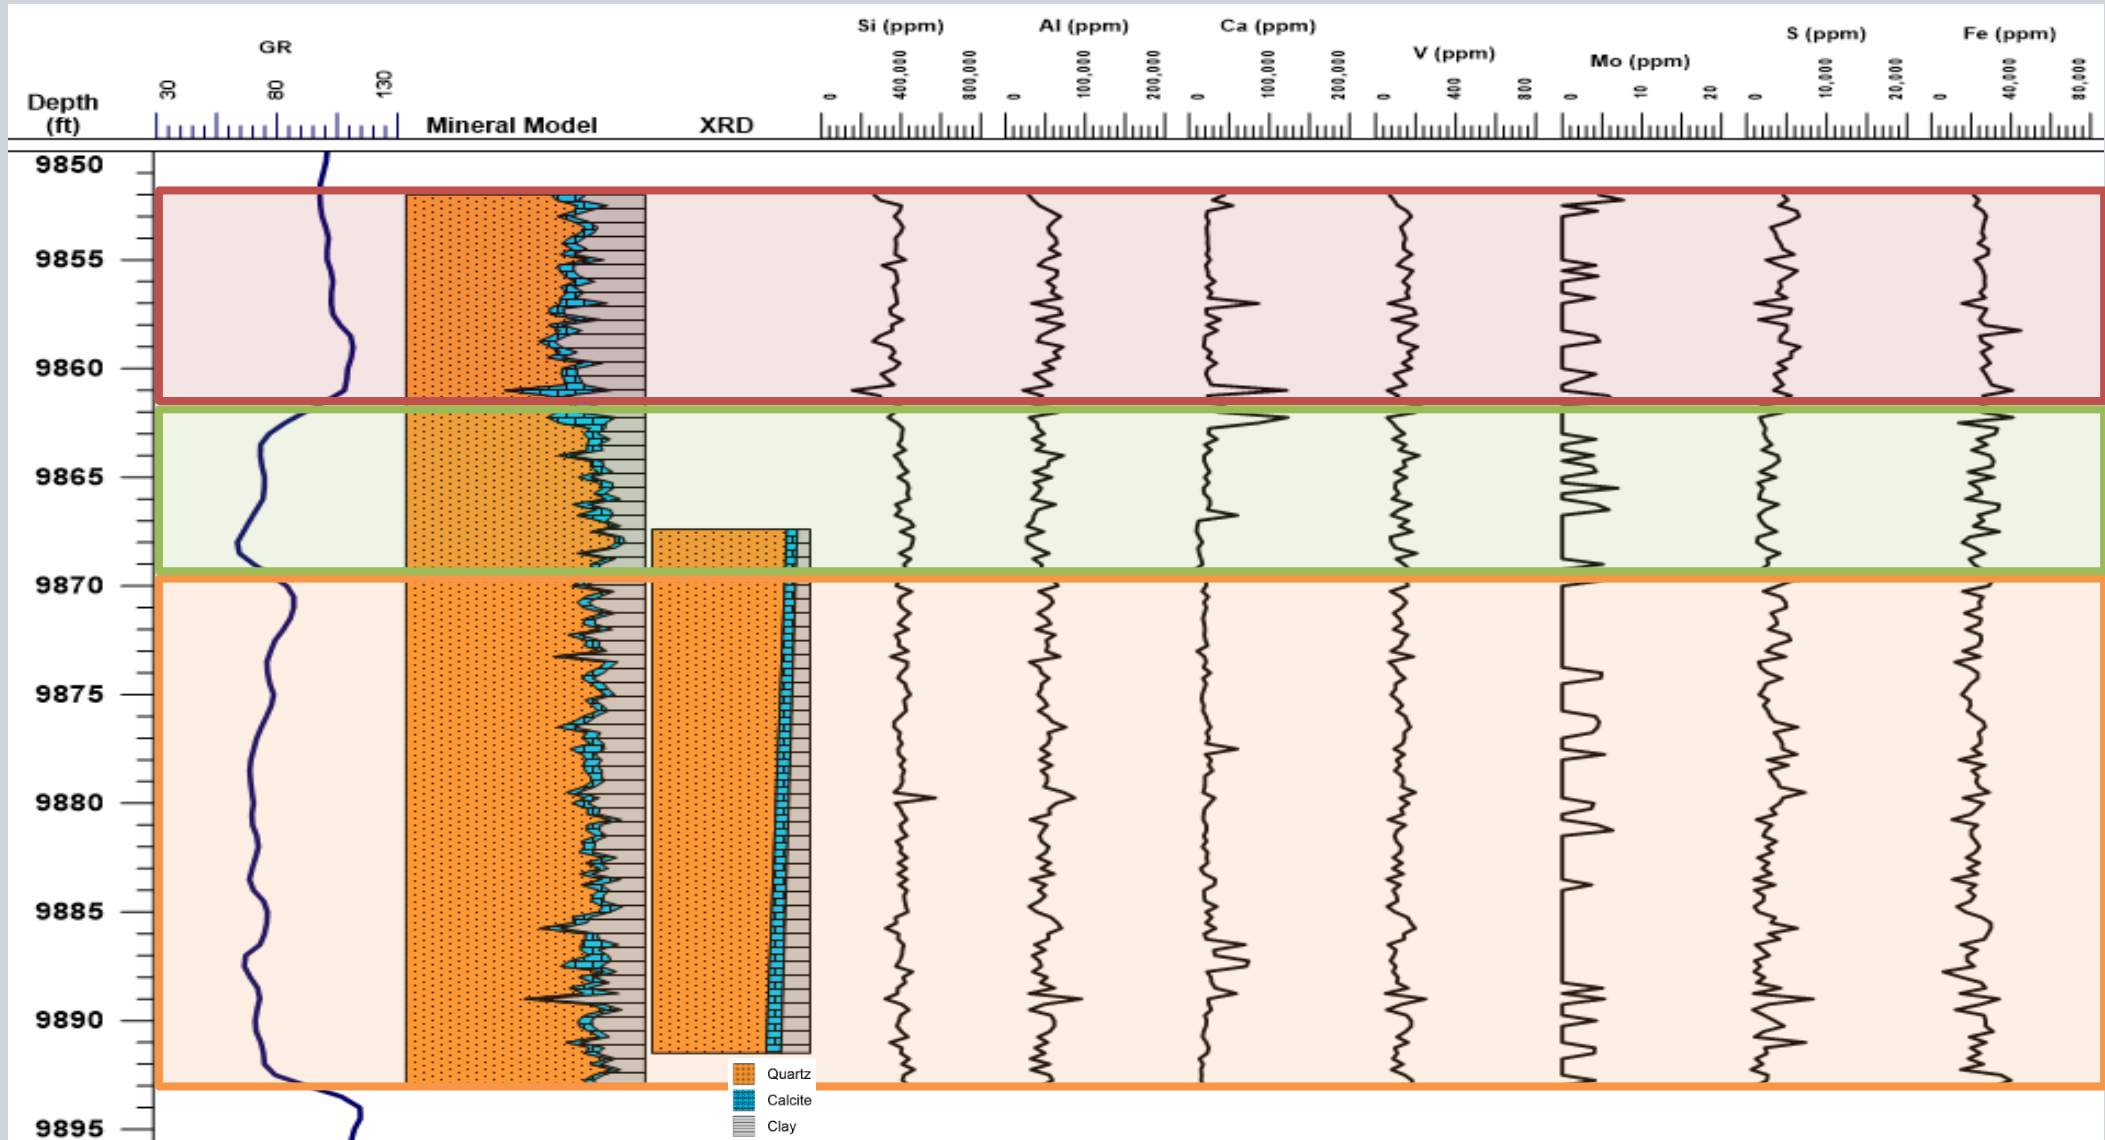

Facies 1: Moderately bioturbated silty sand

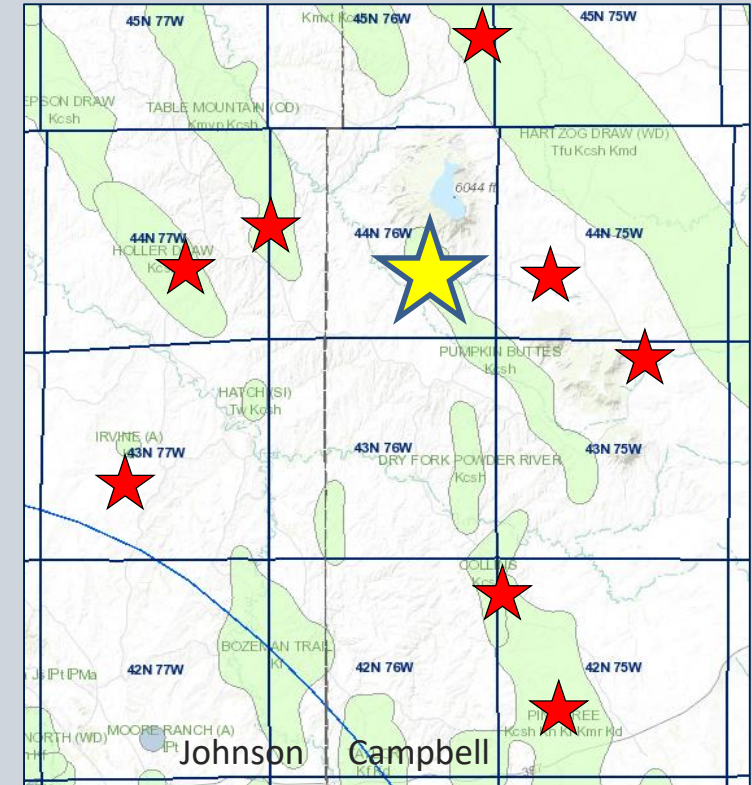

# Cactus Ranch Logs

# Cactus Ranch - Chemostratigraphy

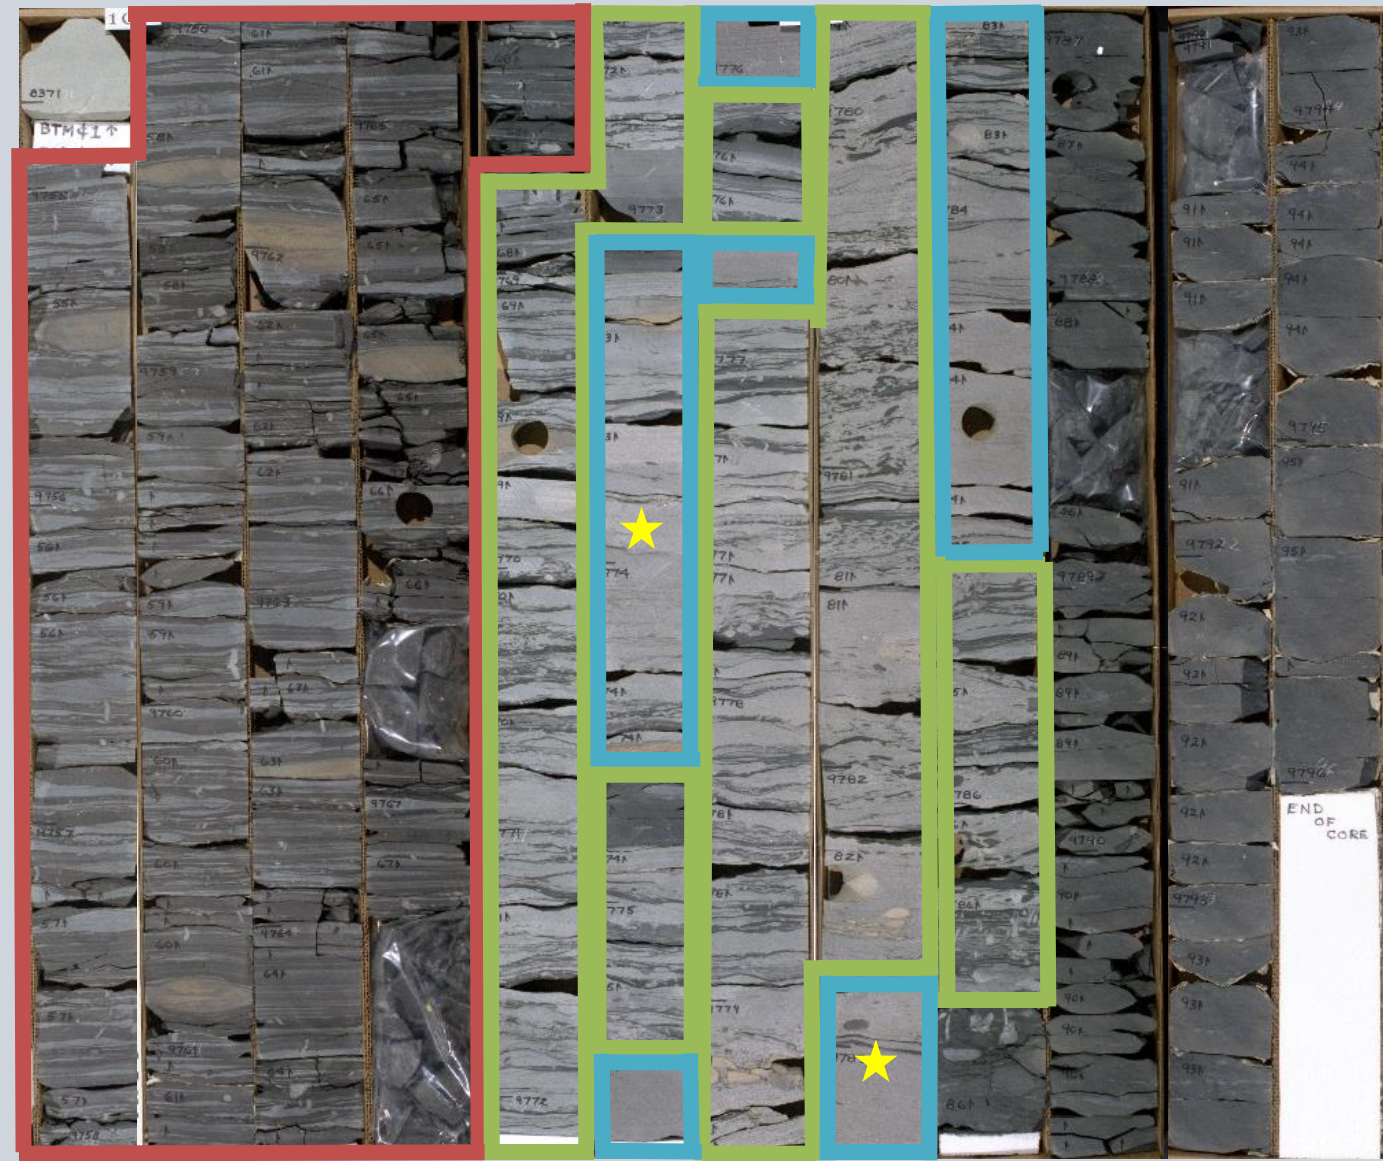

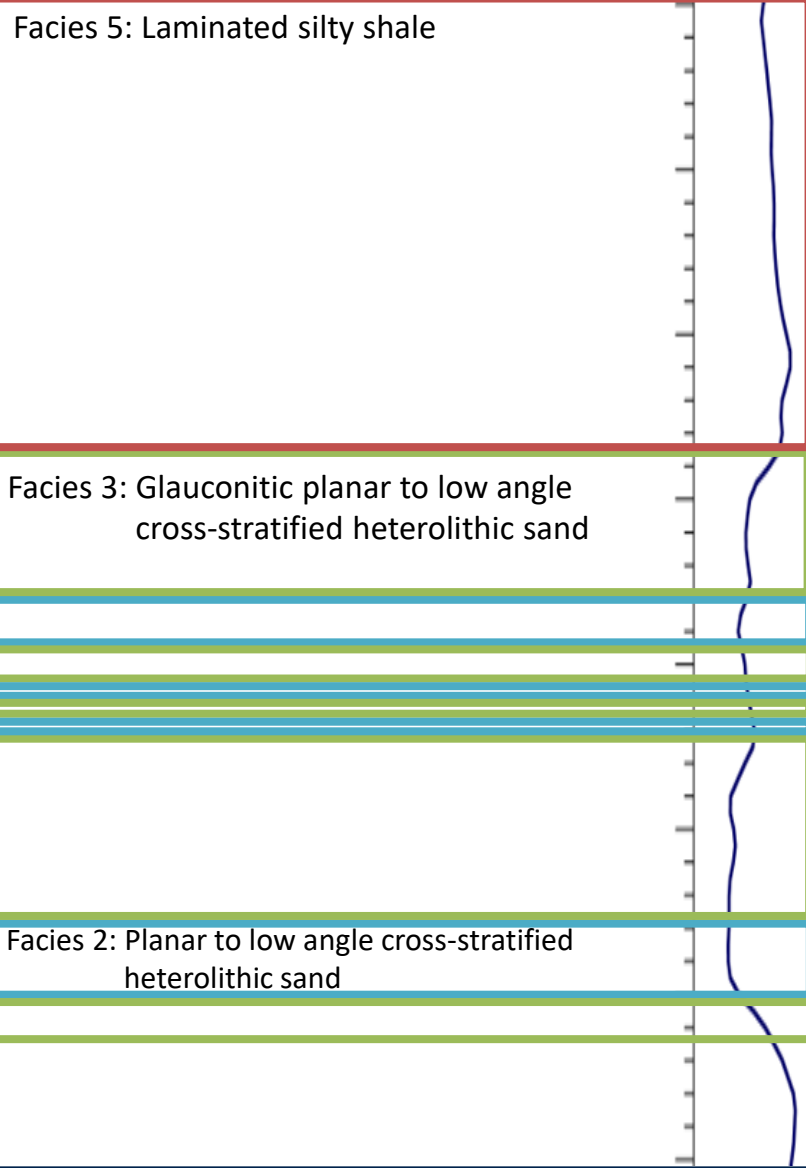

# 1 Christensen G

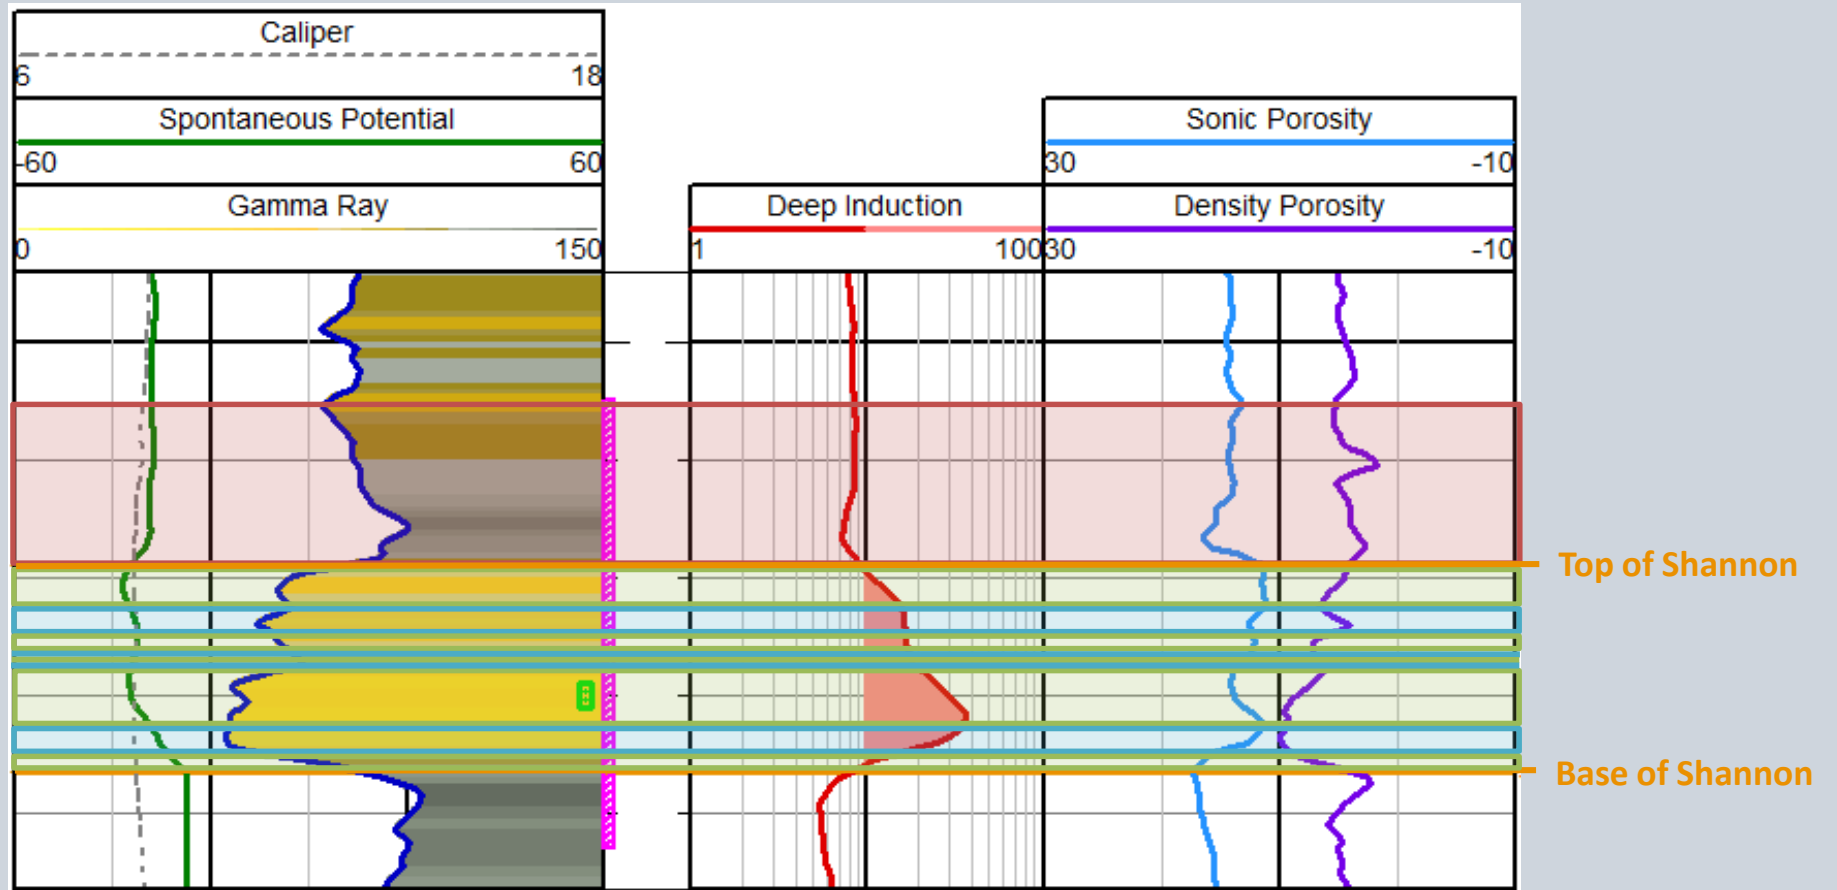

## 1 Christensen-G Well

- Northern part of the study area
- T44N R76W, Campbell County, section 22
- Available data: XRD, 2 thin sections, and 40' of core

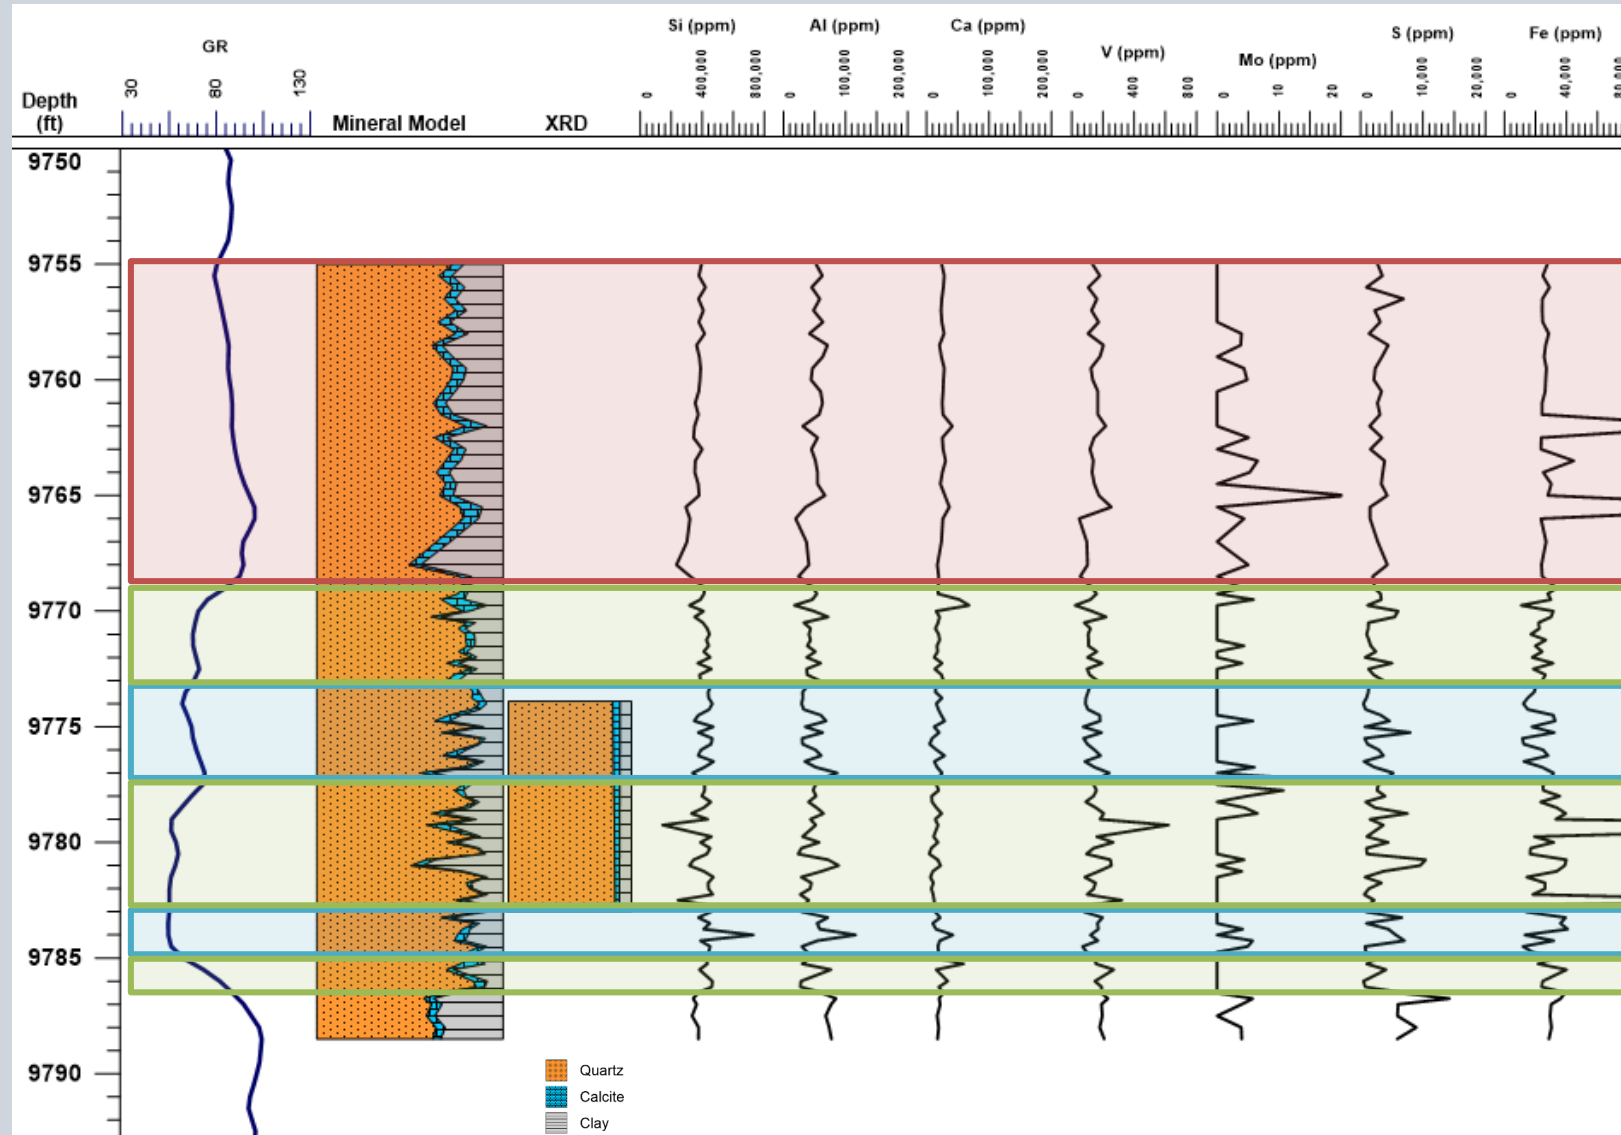

# 1 Christensen G Facies

# 1 Christen G Logs

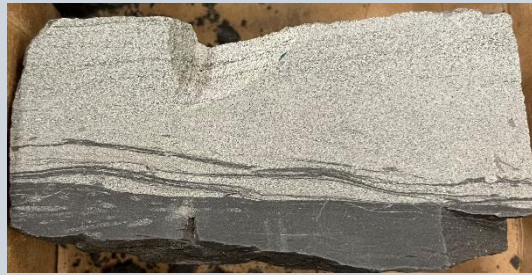

# 1 Christensen G - Chemostratigraphy

# Shannon Facies

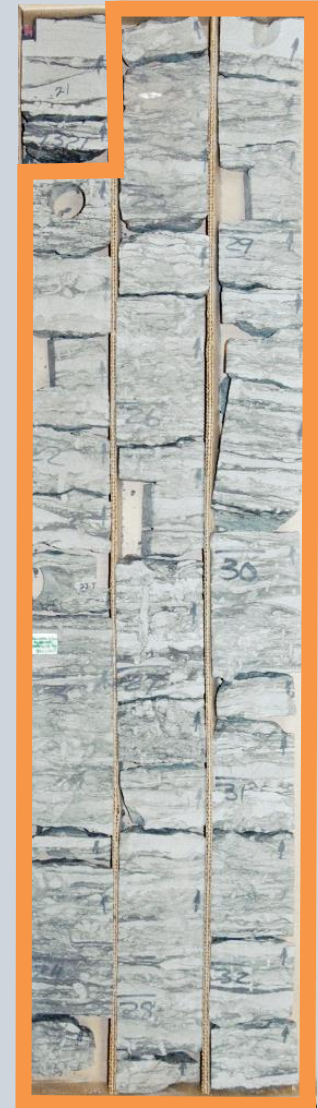

Facies 1: Moderately bioturbated silty sand

1"

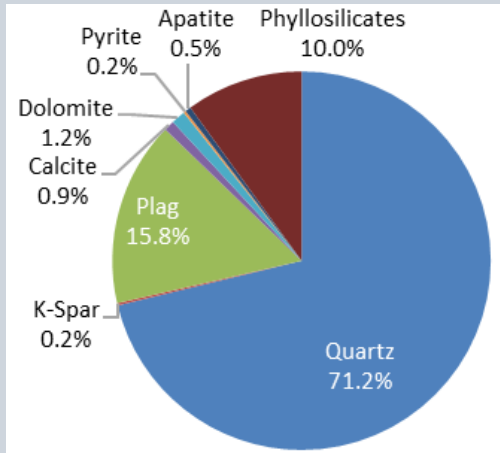

1"

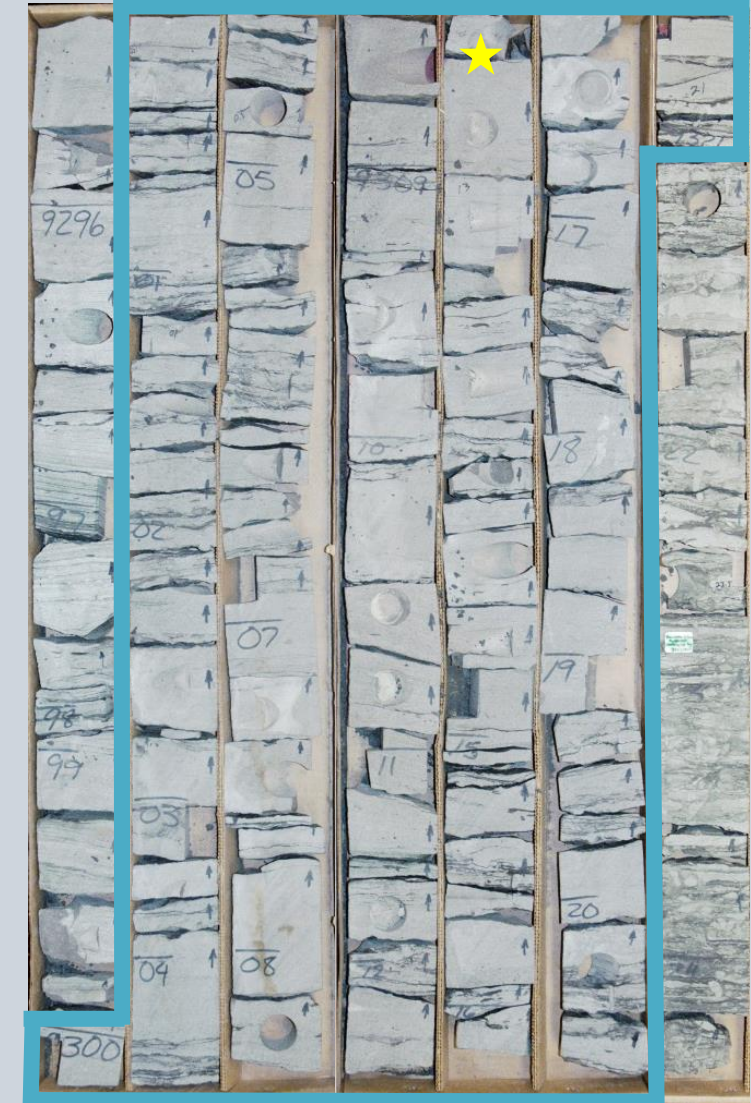

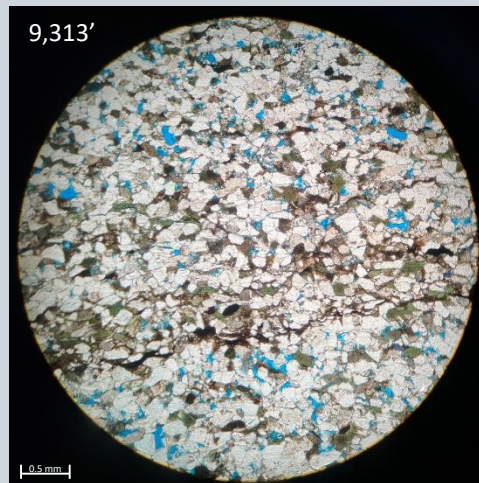

# Shannon Facies

Facies 2: Planar to low angle cross-stratified heterolithic sand

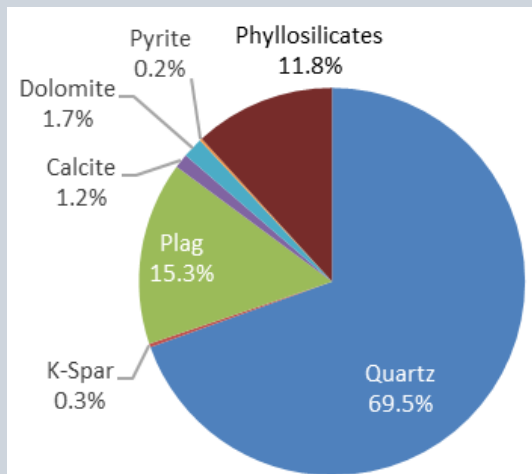

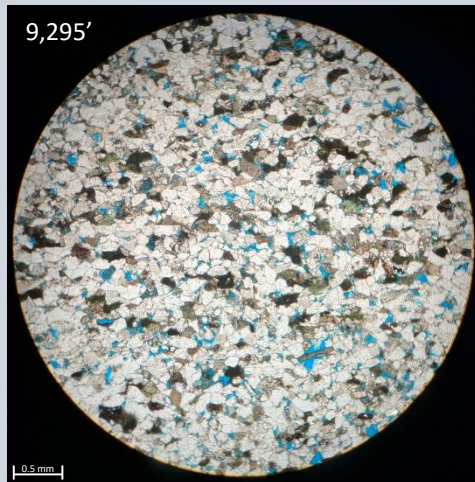

$$\varphi = 10.8\%$$
$$k = 3.7\text{mD}$$

# Shannon Facies

Facies 3: Glauconitic planar to low angle cross-stratified heterolithic sand

1"

$$\phi = 11.9\%$$

$$k = 0.61 \text{ mD}$$

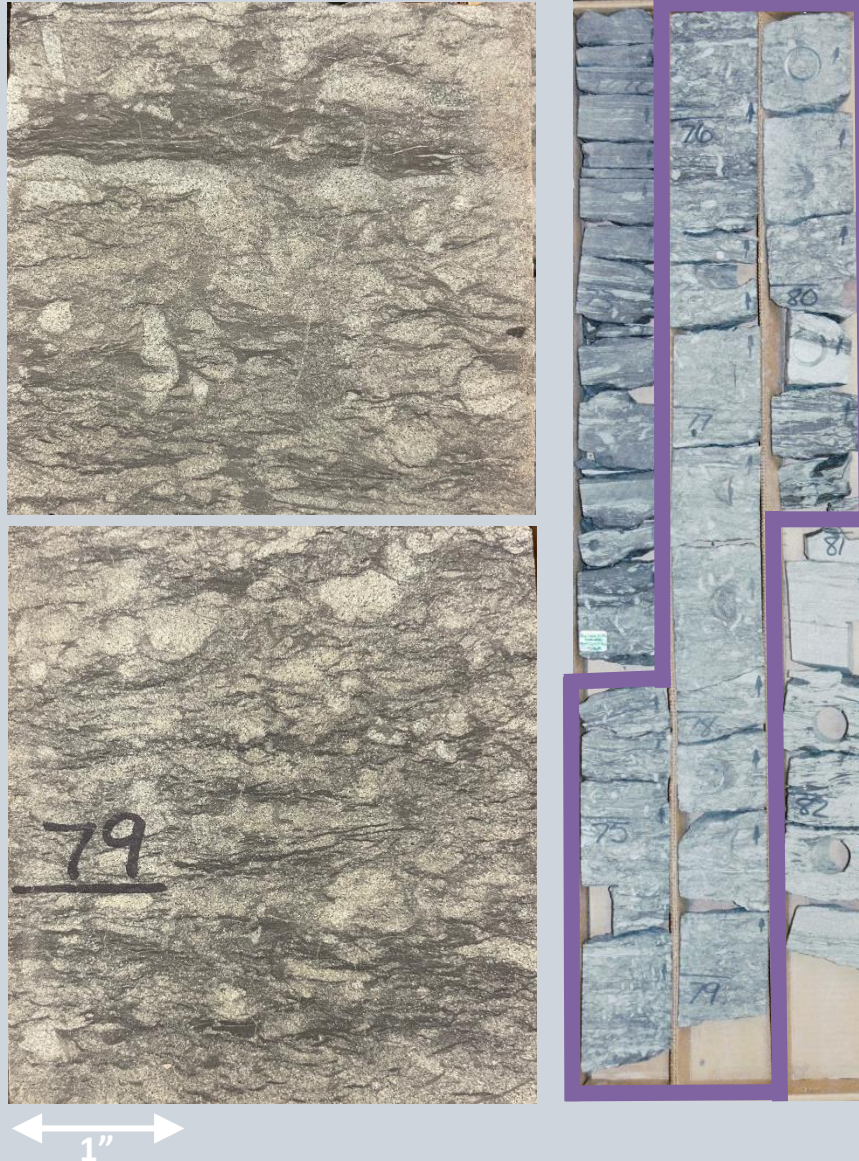

1"

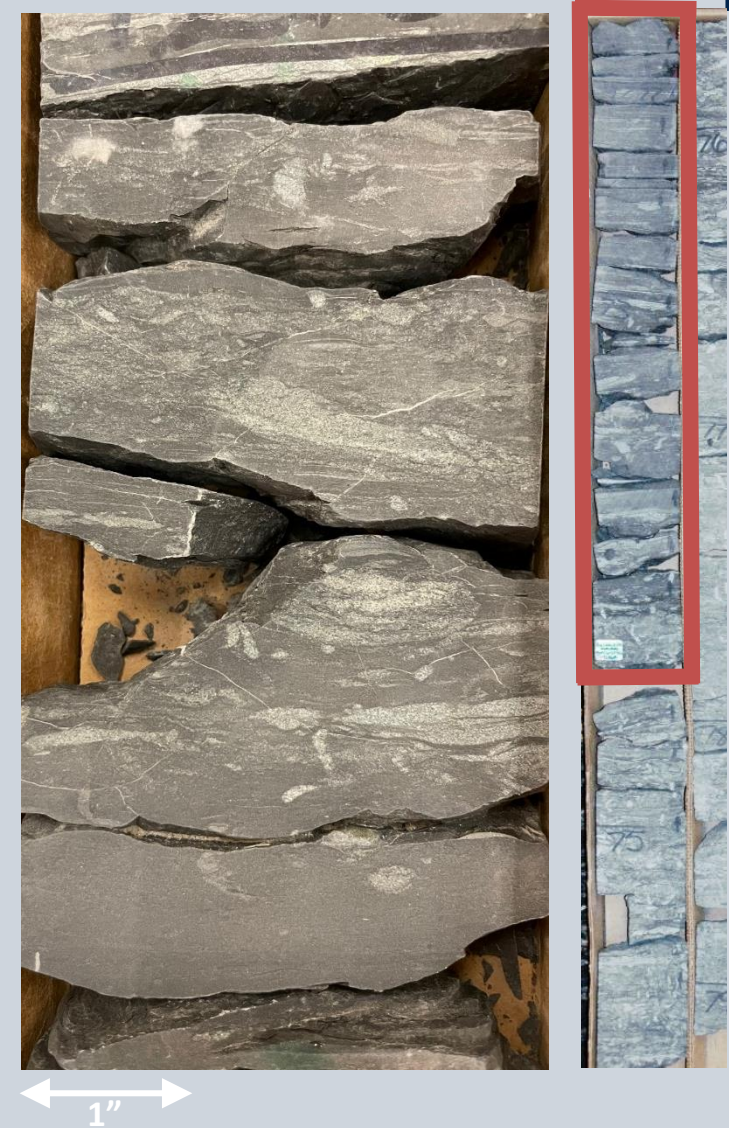

# Shannon Facies

F4: Heavily bioturbated silty sand

F5: Laminated silty shale

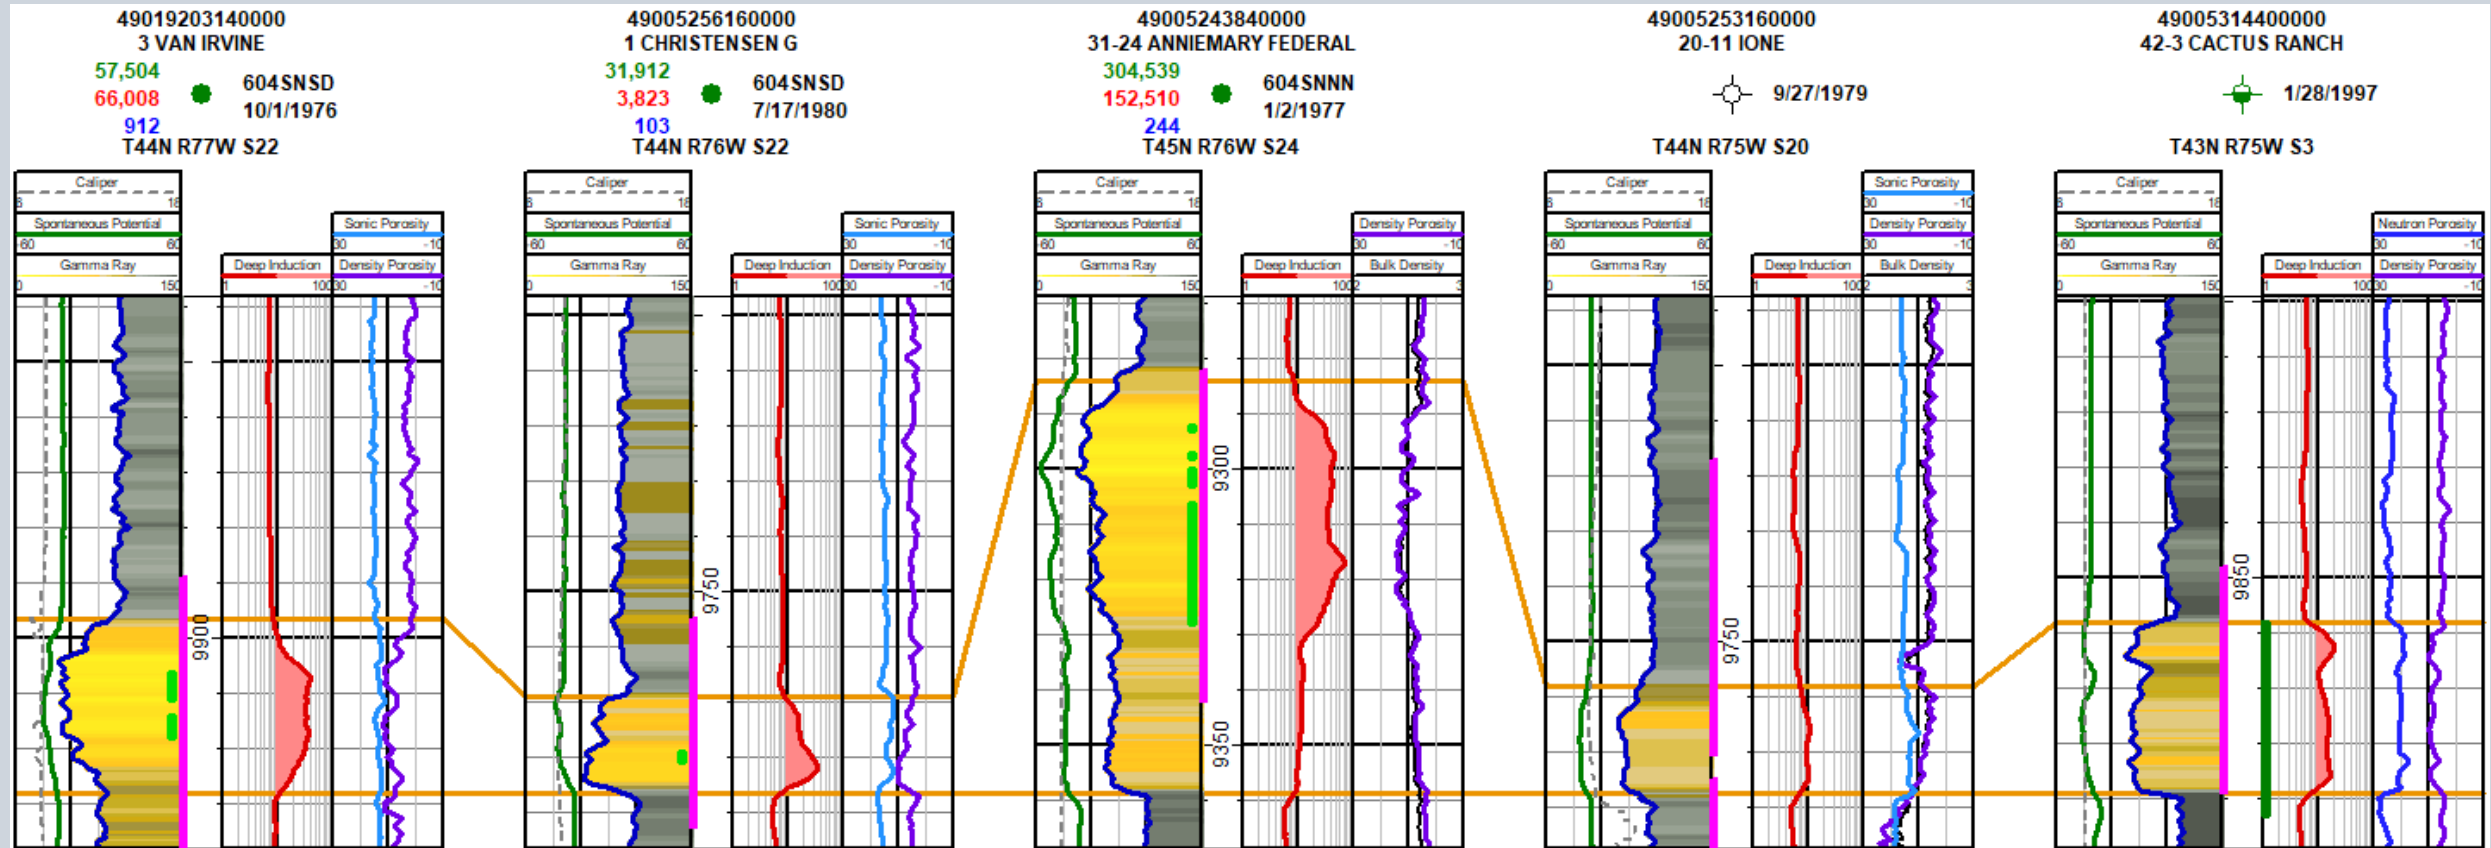

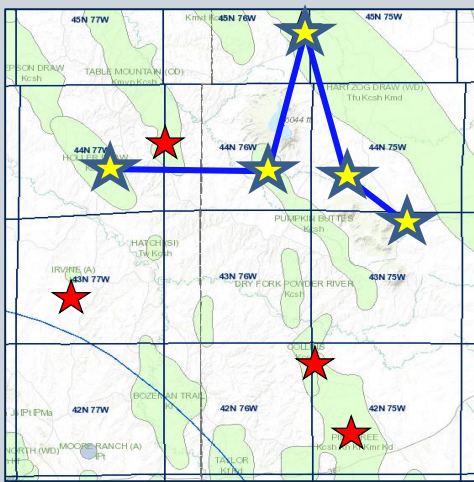

COLORADO SCHOOL OF  
**MINES**  
**MUDTOC**

# Halo Play Potential

# Continued Work

- Core and outcrop analysis
- Thin section analysis
- XRF and XRD
- Subsurface analysis
- Characterization of lateral and vertical variability
- Write thesis!!
- Graduate!!
